Background

Esquire Technology Limited has been formed to ensure the best use of the products of technology between the diversified business entities and skilled individuals, as well based on the contemporary business needs to align the competency of local business using technology with international standards. Our ERP is a macrocosm of transaction and intelligence framework designed to cater to the information and data needs of specific industries with the most modern technologies available. Our product carries within, the most appropriate and process agnostic functionalities fitting very basic to complex scenarios, maintaining user experience and performance. Augmented for the Cloud, with most modern web technologies and our Proprietary Business Logic Framework with highly efficient data processing and delivery algorithms, and has a proven record of being rapid and real-time.

With 10 developers as of 2021, we have started our journey by developing integrated ERP for a renowned manufacturing entity from apparel and textile industry. Now, a group of high skilled business analyst and implementor enabled us to deliver one-stop solutions addressing the full spectrum of business information needs. Our success stories include development of customized integrated ERP for accessories and plastic manufacturing companies and development of IoT tools for tracking the production of footwear companies. Esquire Technology Limited is specialized for providing integrated ERP solution for manufacturers.

Vision

“Continuous effort to enhance integrity by developing new technology for business process automation.”

Mission

By offering integrated systems leveraging IoT for the tracking of products, processes, and services, we hope to strengthen the business competency of our customers.

To achieve this goal, we follow global technological innovations and improve continuously our software suite **e-bit** (Enterprise **integrated** Business Information Tool). Esquire Technology will serve as a go-between for the research and development partner for the technological development of a commercial entity and the integration of software platforms.

We are committed to delivering key information and visibility to management over business and processes allowing analytics to ensure operational support.

Product & Services

Integrated manufacturing ERP

Visualize the snap-shot of total business operation from order sourcing to shipment and gain evolutionary control over all stakeholders and processes in-term of monetary value and performance. Yes, that is our software suit “e-bit”, end-to-end customized ERP for apparel and textile manufacturing venture.

Supply Chain & Inventories

The Supply Chain is a very complex process that demands clarity. The major objective is to structure the business so that it can meet standards for supplier evaluation, products, quantities, delivery dates, quality, and prices while also best meeting consumer wants.

IoT

Pro-bit is a module for simplified data collection of production progress using advanced technology. Machine Maintenance manages the planned and unplanned maintenance activities on your resources, promptly recording activities and related costs. All of these modules are capable of receiving data directly and leveraging the Internet of Things being created in your manufacturing environment.

Finance & HR

In manufacturing plant, managing human resource is one of the most significant and challenging tasks for that organization. Moreover, with HR&PAYROLL module, it is possible to optimally manage humane resources, simplifying and standardizing management processes across your organization. And the Finance module allows improved and advanced financial operations and management tools for accounting and financial processes. Finally, a business can access data from various regions and sources, do efficient analyses, construct interactive dashboards, and produce powerful reports using business intelligence tools.

Planner

Efficiently allow you to plan every single task related to man, machine, raw-materials and processes managing the lead time.

Textile

Traceability of end-to-end textile processes with vertical integration to apparel manufacturing reference.

Web Applications

In a digital environment, our goal is to ensure user experience integrity while simplifying data administration and the supply chain. Businesses can save operating expenses and provide better assistance to their suppliers, customers, vendors and employees by investing in digital. We created several web applications to help its clients in all directions.

Cloud Services

We offer cloud services. As interest in cloud computing grows, it has transformed how businesses manage their IT infrastructure by enabling them to work with systems without having to spend money on the purchase and upkeep of servers. While some businesses are concerned about the security of their data on the cloud and prefer traditional management choices, early adopters of cloud services find them to be user-friendly, have a lot freer memory, and have universal access.

Value Proposition

- Efficient time and cost management.
- An increase in operational productivity
- control over the efficiency adjuster
- Highly accessible
- Our founding principle is to offer the highest level of data security and accuracy.

Why us?

- Fully Integrated ERP for Textiles & Garments using IoT
- On-demand public and private cloud-based solutions
- Precise analytics to make decisions quickly and accurately about production and inventory
- Minimize Overhead & Wastage
- Visibility over led-time
- Proactive Decision maker
- 24/7 Helpdesk
