• Industry and Market

Bangladesh has identified ICT as a "prospective sector" as it represents the potential for successful improvements, job creation, industry growth and developments, and high spillover effects to other sectors as well as improving governance and facilitating inclusion. The current World Bank's Country Assistance Strategy for Bangladesh also recognizes the key role of ICT in supporting Bangladesh's growth, competitiveness, and governance agenda. The ICT industry in Bangladesh, especially the software and ITES industry, is moderately small compared to the dimension of its national population (160 million-plus), and the size of the national economy. However, the software and ITES industries in this country have started promptly growing in recent years. The average annual growth rate of these industries here has been over 40 percent for the recent five years, and this growth rate is expected to continue. This optimistic growth is supported by good software export trends and large demand for IT automation in the domestic market.

IT/ITES companies have created a sizable market space in service industries like telecommunications, retail and wholesale, healthcare, education, publishing, and real estate. The growth in the software and ITES industry has been driven by this growing IT automation demand in the domestic market. The impressive trends in software exports in recent years played a deterministic role as well. Bangladesh has made major strides in laying the groundwork for a diverse and successful outsourcing market.
