About Us

Be Data is end-to-end software and data solutions company, specialising in:

Software Design & Development: Decades of experience crafting high-quality, scalable software solutions using the latest tools and techniques.

Data Strategy & Engineering: We help you unlock the potential of your data, and help you build robust infrastructure and pipelines.

Data Analytics & Insights: Actionable insights gleaned from your data, empowering informed decision-making and optimising performance. Access a global pool of remote data and software professionals, seamlessly scaling your team on-demand.

01 Discover

The objective of the Discover phase is to gain an overview of the overall business, the technology and data platforms and the maturity of its data strategy.

02 Define

After compiling the information obtained from both individuals and technologies, we summarise it to determine the current status and offer practical recommendations on the optimal methods for acquiring and utilising external and internal data during the Define phase.

Our Process

03 Develop

After gathering information from various sources, including individuals and technologies, we analyse and synthesize it to determine the current status and provide an actionable roadmap to realise the vision of being data driven.

04 Deliver

After defining the roadmap development, we commence the delivery of technical solutions by providing the appropriate level and blend of resources to meet the desired objectives at every stage. By working in bi-weekly sprints, the development process can adapt to the evolving data strategy and iterate accordingly.

Our Services

Be Data offers solutions in data strategy, analytics, software development, and Odoo ERP to optimize operations, leverage machine learning, and drive efficient growth.

Data Strategy

92% of businesses invest in data and AI, yet few use it effectively. Be Data helps align data strategy with business goals to drive smarter decisions and customer growth.

Technology Strategy

Technology brings vast opportunities, but also risks. Be Data's expert team builds scalable, value-driven data solutions that simplify complexity and seamlessly integrate across your organisation.

Software Engineering

With growing data, many struggle to drive ROI. Be Data helps activate data through segmentation, predictive modelling, visualization, and advanced analytics to turn insights into results.

Data Engineering

We provides custom data science services using machine learning to optimize strategy, automate workflows, and deliver transparent insights that enhance efficiency and drive business growth.

Data Analytics

Be Data Solutions delivers tailored machine learning services—developing, deploying, and supporting ML models that optimize operations, solve business challenges, and drive innovation across industries.

Data Science/ML/AI

We create custom software, websites, and mobile apps using Agile, Waterfall, and DevOps methods to improve business operations, ensure quality, and help companies grow efficiently.

Odoo ERP

We streamline your business by integrating sales, finance, projects, and inventory into one platform. Odoo ERP automates tasks, adapts to your needs, and helps you make smarter, data-driven decisions.

Remote Resources

Elevate your data science and software projects with our Remote Resource Service. Access a global pool of skilled professionals, ensure seamless collaboration, and optimise costs. Drive innovation securely with our tailored, flexible staffing solutions, designed for the dynamic needs of your company.

Why Chose Us?

At BeData, we make data simple. We specialize in creating custom software, building data strategies, and providing data engineering, analytics, and machine learning services, all aimed at helping your business reach its full potential.

We've worked with big names like Hearst UK, HMV, AlShaya Group, Spring, Hola/Hello, The Economist, and Acacium Group, supporting them on their journey to become more data-driven, data-informed, and data-mature.

Our approach combines software solutions with valuable data insights, helping you make better decisions, improve operations, and grow your business. Whether you need data engineering, data science, or custom software development, BeData has the right tools and expertise to get you the results you need.
