

Company Profile

About Us:

Anchorblock is a quantitative hedge fund manager and Defi consulting firm focused on machine learning research and development in Finance and a wide range of real-world application development. We research alpha factors that have been extensively used in stock trading and explore new potential alpha factors. Our service is fully algorithmic trading strategies based on mathematical frameworks and AI rather than human intuitions and biases. We research alpha factors that have been extensively used in stock trading and explore new potential alpha factors. We can provide both high-frequency and low-frequency trading-based portfolio management systems.
