

G10 InfoTech Limited
Together Towards Tomorrow

2023

ABOUT US

G10 InfoTech Limited is an IT Enabled Services Company in Bangladesh. G10 InfoTech team brings a vast experience of IT industry veterans along with young energetic personnel to keep up with digital transformation journey of our valued customers. We strive to deliver more efficient, effective and relevant quality services and solutions tailored to the increasingly complex demands of organizations, in order to boost productivity of operations and to maximize value for our customers. Our services include Cybersecurity, IT infrastructure, Data Center, Web Application, Modern workplace solution, Virtualization, Cloud Services and IT Consulting.

Vision

Our vision is to be the partner of choice for digital transformation of any valued organization. We enhance the efficiency of businesses through digital technology. G10 offers a full range of solutions for all industries to supply modern technologies for any IT budget. We focus on crucial IT areas, where development is the key to business growth in today's reality.

Mission

Our mission is to "Move forward together with our customers towards tomorrow's technology."

CORE VALUES

Values are the guidelines that help us build relations with partners, customers, other market players, and colleagues. We all share these principles.

Teamwork

Customer Focus

Innovation

Responsible Business

Leadership

OUR SERVICES

Consulting

Turn complexity into progress, unlock new business opportunities and increase the value derived from data to drive impactful outcomes for strategic objectives. Our consultants will help you accelerate value realization and increase change effectiveness.

Operations Consulting

Plan, design and implement solutions that advance core business functions, increase quality of outcomes, and reduce the friction and costs of asset-intensive operations.

Transformation Consulting

Secure business alignment and adoption while building target states and architectural foundations. Increase change effectiveness critical to transformation and deploy on-demand framework.

Technology Consulting

Lead the architecture, development, integrations and performance engineering of technology platforms including data operations, system intelligence, automation and IT productivity for long-term agility.

Experience Consulting

Develop new ideas to capture value creation opportunities with a focus on the quality of the stakeholder experience, guided collaboration and jointly imagined, client-specific differentiation.

OUR SERVICES

Applications

G10 is your trusted partner to help you simplify, modernize, and accelerate mission-critical applications that support business agility and growth. Take advantage of the latest digital platforms with both custom and packaged applications, ensure resiliency, launch new products and enter new markets with minimal disruption.

Applications Modernization

G10 Infotech applies intelligent automation and continuous optimization to drive out costs and simplify the IT estate. We use ideation, pilots and proofs of concept to quickly identify modernization priorities, building and deploying modernization sprints at scale.

Enterprise Applications and SaaS

Accelerate innovation, delight employees and customers, build resiliency and drive business growth with packaged business platforms such as Microsoft, Oracle, EDB Red Hat, VMware and Citrix. G10's Enterprise Applications & SaaS offering helps customers develop, integrate, implement and manage enterprise applications across lines of business.

OUR SERVICES

Modern Workplace

Reinvent the workplace experience. Put the employee experience first to achieve new levels of productivity, engagement and collaboration, and help win the war for talent.

Modern Device Management

Give your employees the power to work from anywhere and on any device, while managing, securing and delivering a rich experience across devices and apps.

Intelligent Collaboration

Enable your employees to connect and collaborate for greater productivity from anywhere, using next-generation voice, video and web conferencing, as well as traditional unified communications. With virtual world technologies, you can use the metaverse to build communities, conduct training and hold events.

OUR SERVICES

Cyber Security

G10 Security services help you assess risk and proactively address all facets of your security environment, from threat intelligence to compliance.

Security Risk Management

Gain full visibility across people, processes and IT security risks to make better business decisions. G10 helps you manage risks across the expanding enterprise perimeter, including remote working environments and the cloud.

Secured Infrastructure

Secure your applications, cloud, hybrid infrastructure and endpoints from exploitation based on your unique security requirements. We design, install and integrate perimeter, network and endpoint solutions with advanced threat protection so you know you're safe and compliant

Cyber Defense

Protect your enterprise, safeguard critical assets and increase enterprise visibility with our cyber defense services. We manage security operations and apply intelligent automation to protect against breaches, detect threats and ensure rapid incident response.

Digital Identity

Enable people, applications and machines to verify their digital identities and securely access your data and services. We support a full range of capabilities including multifactor authentication, identity governance and privileged account management to safeguard your enterprise.

OUR SERVICES

Infrastructure

G10 provides state of the art infrastructure solution which serves your business needs and keep your organization up to date.

Network design and installation

We help customers build reliable, modern, and cost-efficient computer networks with variable bandwidth. Softline provides a full range of services including selection, design, configuration, and support of networking hardware.

Wireless access

The Wi-Fi networks that we design and install are an ideal enterprise-level solution. Custom-selected hardware, the right positioning of access points, a meticulous calculation of the coverage zone and access point workloads, as well as the use of radio interference suppression help us build excellent networks featuring fast connection, high speed, and low latency.

Data Center Infrastructure

We have all the qualification and experience to deliver even the most sophisticated projects including the construction and optimization of engineering systems and their integration with the hardware and software at the data center. Solution includes Cooling systems, Power supply systems, HVAC systems, Server racks and cabling, DCIM Solution, Comprehensive security system, Engineering structures, Structured cabling, AFSS, MDC and many more.

Managed Services: Technical Support and Resource Outsourcing

Our technical support team helps customers enjoy a high availability and solid performance of their infrastructure, applications, and services. We have knowledgeable certified personnel on board as well as all the resources and facilities needed for professional assistance.

OUR SERVICES

Support Services

- 24x7 dedicated phone line, email, and Service Desk support.
- Access to suppliers' technical support sites (request monitoring, progress tracking, and forums with engineers).
- Consultations on installation, setup, technical issues, configuration, and administration for customer staff.
- Remote connection sessions to provide support
- Incident escalation to the vendor level.
- Statistical reports on requests.
- Emergency on-site visits.
- On-site preventive maintenance.
- Assignment of dedicated technical experts to the customer.

IT Operation Outsourcing

Outsourcing of routine tasks allows the customer's engineers to focus on value-added activities. Service standardization, quality assurance, reporting, analysis, optimization, and proactive measures reduce operating costs, increase reliability and improve infrastructure performance. Infrastructure outsourcing includes an initial audit, negotiations on the level of service, building a team for the transition period, reaching agreement on the time frame and organizational/technical measures during this period. Full-scale outsourcing starts with due consideration of recommendations and conclusions made in the course of transition.

Data Center Infrastructure

We have all the qualification and experience to deliver even the most sophisticated projects including the construction and optimization of engineering systems and their integration with the hardware and software at the data center. Solution includes Cooling systems, Power supply systems, HVAC systems, Server racks and cabling, DCIM Solution, Comprehensive security system, Engineering structures, Structured cabling, AFSS, MDC and many more.

PRODUCTS AND SOLUTION

G10 Infotech offers a plethora of renowned Enterprise Products and Solution. We cover End to End IT need of and organization.

System Solution:

- Server
- Storage
- HCI
- Virtualization
- Backup Appliance

Network Solution:

- Routing
- Switching
- Wireless Networking
- SDN
- Collaboration
- Passive Infrastructure

Cyber Security:

- Firewall
- XDR
- SIEM
- PAM
- WAF
- Load Balancer
- DPI
- Email Security
- Threat Analysis
- VA/PT

Enterprise Software Solution:

- Operating System
- Backup Software
- Database solution
- Virtualization Software

Data Center Solution:

- Power supply and backup solution,
- Cooling solution
- AFSS
- EMS
- DCIM Solution,
- BMS Solution.
