IT Solutions Delivered !

about us

Innovative solutions to move your business forward

UMR Labs founded in 2015, provides professional Tech services support to small & large businesses globally. UMR Labs started official journey from 2022 and before that UMR Labs has done lots of work in inhouse.

We employ experienced IT architects, marketing, UI/UX professionals and pride ourselves on providing the quality and creativity of a big agency with the attention, commitment, and care of an in-house team.

Executing creative and effective IT Solutions and deriving continued satisfaction among our valued clients who seek our services round the clock. With our intensive R & D efforts, quality and competitive cost-effective structure, we are well positioned to take up new challenges to meet the leading edge in any business solution, having long lasting impact in the field of software development both in creativity and uniqueness.

research

Blockchain

We offer various blockchain related services that include but not limited to blockchain setup and maintenance, distributed ledger consultancy, smart contract programming, developing decentralized applications (DApp), building NFT, DeFi and similar services. We have experts from the team developed world's first blockchain based decentralized Covid vaccine certification system and several other projects.

Digital Currency

We offer digital currency consultancy and are capable of providing a number of Fintech services such as digital currency development, electronic payment system, cryptocurrency and decentralised borrowing. Our experts include academics and researchers from the US and the UK working on fintech and blockchain projects funded by respective governments and private clients.

AI

We offer Artificial Intelligence (AI) solutions covering a vast range of services such as automation at scale, holistic insights, increased productivity using machine learning and other statistical methods. One of the key strength we can bring is our development capabilities of AI applications and integrating them with user-centric applications, for example cryptocurrency price prediction engine, stock forecasting solutions for restaurants and so on. Our experts have experience working in AI projects funded by the UK and the US government agencies.
