

"Our services for star-IT happening"

STAR INFOTECH LIMITED

star-infoTech

BUSINESS PROFILE

Company Profile

Star Infotech Limited is a new multi-disciplinary IT services and consultancy (electrical drives & protection) (BIN: 005867237-0402} Company specializes in experienced persons and management, we set our goal in Enterprise-Wide Integrated Management Solutions (ERP) that incorporates the use of client-server technology for internet or intranet-based applications. We develop customized user-friendly, highly robust, comprehensive, and easy-to-use solutions fully tailored to satisfy client requirements. Our expertise and project development experiences have made a great impact on both the Public and Private sectors. Star Infotech Limited was formed to specifically address the growing Enterprise Resource Planning Software market. The use of computers in Bangladesh as a research and data manipulation tool dates back over 30 years. Today computers are widely used in offices, businesses, educational institutions, at home, and in the field as well. Bangladesh has started to provide financial and infrastructural facilities to businesses and institutions far and wide over the whole country which in turn has accelerated the use of computers on a mass scale resulting in fast growth of the IT industry. Running a tech startup comes with its own set of challenges. One way to navigate these hurdles is through consulting services, which offer practical advice, aimed at helping you tackle the specific issues you're facing. Whether you're struggling with things like workflow issues, choosing the right technology, or maintaining high-quality output, consultants can provide customized guidance. They bring a wealth of knowledge from diverse industries, which can be invaluable in avoiding common pitfalls and accelerating your startup's growth. What's more, consulting isn't just about quick fixes. It's about setting up long-lasting methods that improve how your business runs day-to-day, allowing you to spend more time focusing on growing your business and less time putting out fires. As a startup owner, you might have limited resources when it comes to people, time, and budget. Additionally, with a big picture in your mind and a multitude of day-to-day operations, you may easily lose focus on what should come first in the development process and what should follow. Software consulting can help you identify the features that should be developed first, improve the scheduling of development projects, allocate resources most effectively, and meet all deadlines. As a startup founder, you are engaged in dozens of day-to-day operations. Some of them may be critical for your company's future, like team recruitment or investor acquisition. With a software consultant on board, you can concentrate on your core business activities. Application software consulting can redirect your internal workforce to focus on the tasks that directly contribute to the company's growth, innovation, and competitive edge. It can provide technological efficiency and empower your team to concentrate on their primary responsibilities. As a result, the company can keep up its current level of operational potential while simultaneously benefiting from cutting-edge software solutions.

Star Infotech Limited
12/Cha/1/A and B, Rd#04 & 02, Shyamoli, Dhaka-1216
Email# info@star-infotech.net
Website# <https://www.star-infotech.net>

The company was established to contribute to the project of Digital Bangladesh, besides being of help to various skilled people for an enhanced livelihood and for allowing them to prove their merit. Once your software is ready, it is time for deployment. A software development consulting firm will stand by you when making your product available for deployment to the destination environment: uploading the software to web servers, software repositories, app stores, or cloud platforms. Managing the launch process means coordinating multiple tasks, such as ensuring that the correct version of the software is deployed, revising documentation, informing stakeholders, and getting the necessary approvals. A software development services firm will be of great help here, too. Software release day is an important moment for every founder. A responsible software consulting company will be available to you during soft and hard launches and performance and user feedback will be monitored. Consultants will be ready to help you with potential bottlenecks or emergency fixes. Any problems that are discovered are mended immediately, either through patches, or updates. We are committed to not only developing and customizing Software or Websites but also to building an awareness of Information Technology and the use of software among the people of Bangladesh. In this country computers and the Internet are still seen as luxury equipment that is out of reach and usage by most people. Most of them still have little or no idea of Information Technology. Most industries have a basic fear of automated systems and applications and avoid them for their daily work. We are trying to introduce these companies to Information Technology and the use of computers and interactive applications. We provided our software to almost two hundred different companies in old Dhaka, companies that had never used computers before and had virtually no knowledge of the great benefits of using Information Technology in daily business work. As a result of using our applications, these companies soon began appreciating the enormous gains that can be achieved in efficiency through the use of computers and software.

Customized Software Development & Data Management Solutions:

Star Infotech Limited develops software for small and medium-sized businesses using a wide range of programming technologies. We are stepping into the development of ERP solutions to serve large businesses. Our IT professionals are well equipped with different types of skill sets and experiences to cater to the needs of clients and provide the solution that best serves their requirements. We have all available testing tools for a thorough analysis and tailored testing process of each solution. Our software development department provides business software development outsourcing services, web-based software application development services, custom application development services, and software product development solutions. Systems that we develop take into account the confidentiality of data and have a strict inbuilt hierarchy of user access rights, for example, some users may just have rights to do voucher entry or some for editing only whereas others may have the rights to generate reports, and some may have the full access right to use all facilities and functions of the systems. This ensures the safe and secure use of the systems by different personnel of an organization.

Network essentials and ISP set up with Linux:

At Star Info Tech, we offer comprehensive Network Essentials & ISP Setup services with Linux to ensure seamless connectivity, efficient data transmission, and reliable Internet access for your business. Our expert team of network engineers and Linux administrators can handle all aspects of setting up and optimizing your network infrastructure, allowing you to focus on your core business activities. Our network experts are available to provide ongoing support and troubleshooting assistance, ensuring your network remains operational and optimized. By choosing Star Info Tech's Network Essentials & ISP Setup service with Linux, you can rest assured that your network infrastructure will be professionally designed, configured, and maintained to deliver seamless connectivity and optimal performance. Contact us today to discuss your network requirements and let us be your reliable partner in building a robust and efficient network environment.

E-commerce and web development.
