01

Introduction

Whether it is custom software, web design or web based applications, plug-ins, apps for mobile platforms or the hardware ensuring seamless execution of these applications, Upgrade U Initiative, equipped with its team of creative designers & developers, stepped foot in the software and ITES industry, earlier in the year of 2021 to develop digital strategies, services & supply products (hard ware / software), architecting secure, efficient, user friendly applications & systems by writing standard, well documented & efficient codes to turn ideas into reality.

02

Technology We Use

Technology

Front-End

HTML5, CSS, JavaScript, React JS, Vue JS

Back-End

PHP, Laravel, Angular JS

Mobile Application

Android, IOS, Flutter

Database

MySQL, Post SQL, MariaDB, Firebase

03

Our Working Process

Our Working Process

01. Wireframes

After receiving the Deliverables, we will create the Wireframe based on requirements & get it approved by the Client. We will also instruct the Content Writer accordingly

03. Front-End Dev.

At this stage we shall convert the Final UI/UX into interactive Web pages, Using front-end coding languages.

05. QA Testing & Bug Fixing

The Website is tested by simulating Real-Time Traffic Volumes & All the Bugs will be fixed. Also following Site Hand-Over we will monitor its Health for a Month (For Free)

02. UI / UX

Upon finalizing the Wireframe, We will start the User Interface (UI/UX) Design. Upon Completion we will get it approved by Client again

04. Back-End Dev.

A custom content management system (CMS) will be designed & the back-end of the site will be developed. We always keep the on-page SEO in consideration, in these stages too
