1.7 Why GreenSofts ?

Improve your Bottom line: Our System are guaranteed to improve your productivity. We never stop working for you improving performance usability and innovative Ideas. We have highly trained team of professionals not only on site but offshore development too. To us delivering the product in time is as important as the performance of the system

Satisfaction Guaranteed: In order to make our clients happy we are willing to do whatever it takes as much as it lies within our power to do so. We therefore offer a guarantee of total satisfaction. This means that in the unlikely event you are not completely satisfied with the end result you will not be billed. We also treat any information we receive with the utmost confidentiality and renounce the possibility of gaining any commercial advantage from our privileged position as your software professional.

Proven Track Record: GreenSofts has proven its capability in technology business. Our customers include major Agro Based Industries, RMG, Distribution House, Manufacturing Company, Hospital etc. All the responsive Software has written during the past 10 years has gone into operation and is successfully fulfilling the purpose for which it was intended. For more information please take a look at our track record or some of the comments from our clients. You are welcome to make direct contact with the individuals quoted if you are genuinely interested and would like further information.

Cost Effective : GreenSofts offshore rates are up to 50% lower than those of our main competitors in India and China. Due to our effective cost structure in our offshore unit in Bangladesh, we strongly believe that we can maintain this advantage in long term.

Incremental Development: We take an incremental approach to software development. This means we build you a business application with as few or as many features as you like. You only pay for what you get (provided of course you are satisfied with it!) New features and enhancements can be added later as required.

Total Quality Control: We have the procedures in place to give us total control over the quality of the software we deliver. This includes a policy of zero-tolerance for software defects or "bugs" in our code. If even a minor defect appears in our software we eliminate it permanently by finding the logical error and fixing it. We do not "code around" or ignore it. Because many of our clients' business operations are critically

dependent on the System we develop we place the utmost priority on ensuring they will continue operating smoothly without interruption. This is particularly important when making changes or enhancements to System that are already in use.

Pre-built Framework: We have built and tested a generic business application that we make available to our clients as a starting point for customized software. We call this our Framework. It includes a general function. It also includes all the logic necessary for client/server communications and database management.
This Framework is a fundamental component in a number of applications used by our clients as part of their mission-critical business operations. It provides them with a sound basis on which to further develop their System as they are subject to larger numbers of users, more and more data and an increasing level of complexity.

Domain Knowledge: Software suppliers will tell you that every business is basically the same in order to convince you that their package will suit your particular requirements. They will then expect you to adjust your business processes to suit their software. And the reason their software is so complex is that it aims to meet, not only the needs of your business but also, the differing needs of a multitude of other businesses at the same time!
At Responsive Software we have a different approach. Our competent professional programmers work directly with you in your business to develop only the software you need to meet your specific requirements. The software we create belongs to you and is designed to provide trouble-free running for your business for many years to come. It also gives you an excellent basis on which to develop your information System as your business grows.
Although the initial cost of a customized system may be greater than that for an off-the-shelf package, the total cost of ownership (TCO) is significantly less when considered over a period of just a few years. And with customized software you end up owning both the software and the source code upon which your business depends. With packaged software all you'll ever get is a licence to use something that belongs to someone else!

1.8 Our Product:

We already developed following customize Software for local Market:
