06. Our Clients

Our Success Story

Our humble beginning envisioned providing highest possible quality at the least possible cost. We managed not only to meet but to exceed our intent. Over the last two decades we reinvented ourselves time and again with pioneering process and tools developed inhouse beyond the market expectations. Golden Harvest Infotech Limited has established itself in the North American market as a leader synonymous with quality, delivery timeline and reasonable cost.

Our Mission

Our mission is to remain a world-class data processing, diversified and socially responsible company that provides high-quality, value-added products and services for our clients. Our IT services range from data entry to data validation and back office work such as business process outsourcing (BPO), image verification and assessment. Our software team provides full support to the data entry, data processing and data analysis system to develop customized data entry software and quality checking tools for each client project.

Our Vision

Our vision is to deliver 99.9% accuracy while delivering every project on time and within the budget of the project. Our goal is to support the client with any and all outsource back office technology tasks and to accurately and effectively complete all projects. We envision a client relationship that is based on trust and confidence and mutual success.

Our Services

Golden Harvest InfoTech is a Bangladesh based service provider of digitization and hosting services. GHIT has over 15 years experience in the document digitization industry and is constantly improving our process to maintain a leading edge in both technology and customer satisfaction.

Digital Operations and Platforms

Digital Operations and Platforms bring together B2B back-office operations and unify them into a single view. It gives the business what it needs most: a space in which operations are streamlined, in which employees can work together, and which allows for great customer experiences. We combine our core business knowledge with leading technologies and analytics to offer powerful business intelligence that helps in improving business visibility, allowing business leaders to respond quickly to evolving market needs. Our technology and wide delivery footprint have created value for clients globally and has been widely recognized by industry experts and analysts.

Business Process Outsourcing

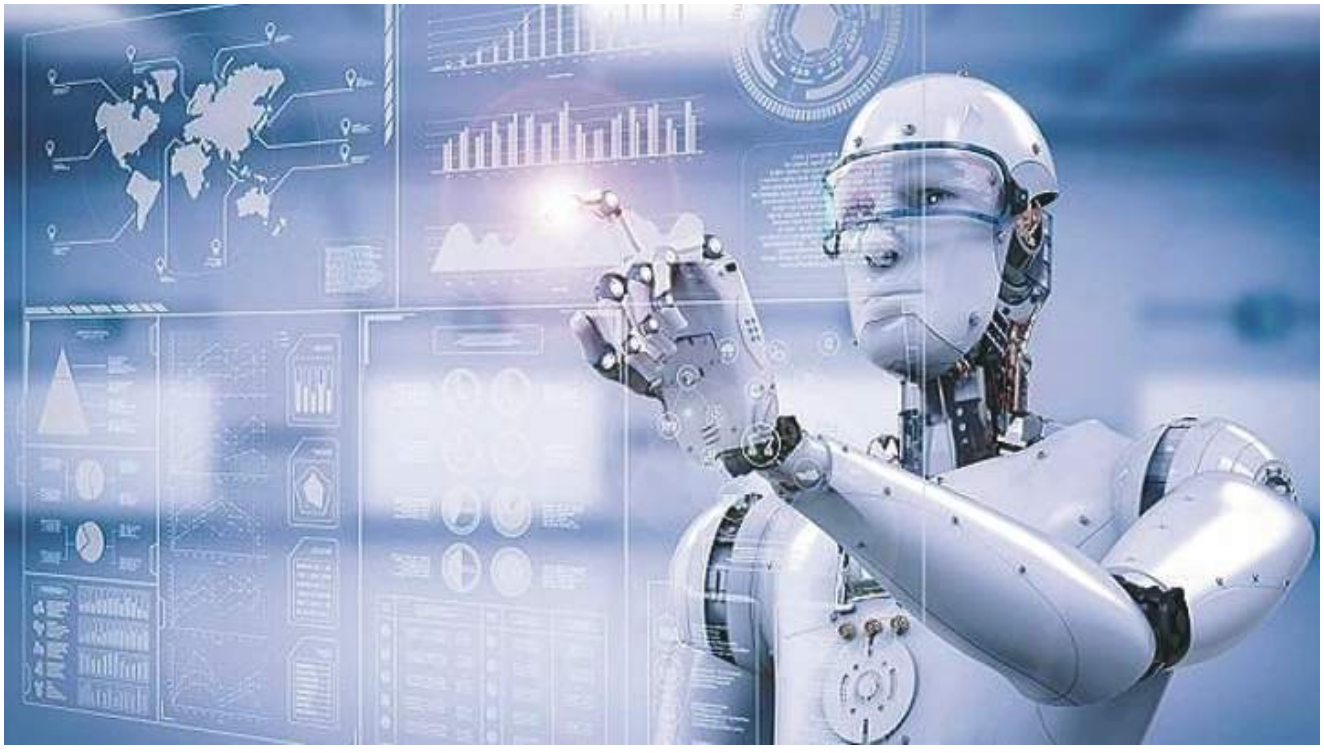
- GHITL offers reliable and costeffective Business Process Outsourcing (BPO) services.

- We have vast experienced on Geographic Information System, mapping service such as identify the electric pole and cable in specific location, freight invoice processing, service review form processing, insurance form processing and book/journal cataloguing services in the BPO.

Data Analytics & Artificial Intelligence

Our Data Analytics and AI services help organizations use data and analytics to create new business models and revenue streams – all while ensuring security, quality and regulatory compliance of data.

Underpinned by technologies such as Artificial Intelligence (AI), Machine Learning (ML) and advanced analytics, our solutions help enhance decision making while enabling augmented intelligence and process automation, leveraging data engineering. Utilize data consumption approaches to bring data science to life through workflow integration of analytics, visualization of information, and integrated processes for decision-making.



IT Function Transformation

Our IT Function Transformation Services supports businesses in delivering their most important and complex technology transformations. We enable our clients create competitive advantage through effective and efficient utilization of IT. Our solutions are targeted at key performance goals, challenges and opportunities of an IT function. We help our clients automate the delivery, build agile capabilities, ensure business-to-IT alignment and optimize cost.

Cloud Service

Digital disruption is impacting businesses in every industry and today's technology-enabled customers are empowered and highly demanding. To meet the needs, we provide Infrastructure as service (IaaS)
