

Empowering Solutions = Liberating Humanity

COMPANY PROFILE

PREFACE

Solution Art is a technology based solution provider company operating mostly in Bangladesh with a vision to expand its operation to south-east Asian countries. We offer the full spectrum of services to help organizations work better through assisting them to find and implement suitable solutions.

Solution Art is operating since 2011. Over last couple of years we have gained experience and reputation. We have delivered many projects with government and non-government organizations, educational institutes/universities, armed forces and business corporations.

Alhamdulillah, Solution Art is now a self-sustained multi sectoral mid-level enterprise. Started with the IT solution development, we became successful to prove our strongholds on doing events, interiors, digital marketing and Desk Top publishing that helped us to gain very good number of clients in Bangladesh.

We assure Solution Art is a robust platform to understand, develop whatever is our customer's need. At the same time expectations of our clients have raised and forced us to expand our operations. In coming years we foresee huge growth of our business.

Establishment & Operation

Solution Art started as a proprietorship entity in the year of 2011; later considering its growth and potential as solution provider, it was registered as Limited Liability Company on 30 March 2014.

Solution Art is a one stop solution provider company. We provide solution and services based on technology. We believe that technology should be implemented only when it is aligned with our client's business vision.

The Head Office and Development Center of Solution Art Ltd. is in Dhaka, Bangladesh. It has been providing solutions to various govt. NGOs, corporate clients since inception. Our team consists engineers and experts from different domains. We follow standard project management, quality control and documentation

We are the team working to achieve results in benefitting the society.

Mission – To design, develop and delivery of empowering solutions to clients through creating excellent user experience.

Vision – Solution Art is working to become a global enterprise as reputed multi service solution provider to make its name synonymous to 'one stop solution provider'. We believe, entrepreneurship embraces innovation and consistent effort to make life better. We are working and we will always work to create brands of useful products and services around people. For that, we should always have an efficient listening system – a listening system which is able to recognize needs of our clients and create pleasant experience through fulfillment. We should always remember 'empathy' is the highest form of intelligence.

Core Values

Honest, Frank and Rational Dealings: Explain what technology can do and what not, candid communication at all phases and establish justice to all stakeholders.

Leverage technology to facilitate empowerment: Facilitate resources, enable and empower client.

Success is a journey, not a destination: Continuity, service commitment, skill up gradation, seek for human qualities.

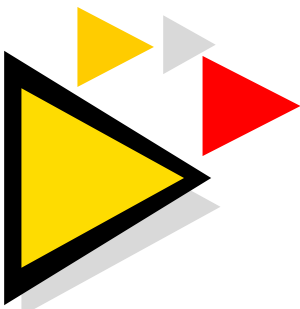

UX

Solution Art's motto is 'UX first'

UX – for us 'User Experience' is not only limited to software interfaces or website user interfaces (UI), rather creation of experience starts from holistic perspective of user's utility. Be it a software, hardware or any other product, services, communication or design, we always keep in mind that we are making things for real people from real world. So, our solution development process is extensively user-centric.

End of the day, it is not technology or high-end material, rather user's convenience that matters. So creating excellent user experience is our primary responsibility. As a solution provider we look for most suitable solution of value for money and 100% utility.

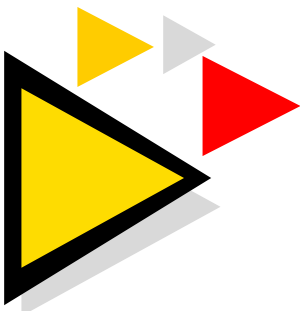

The Factory

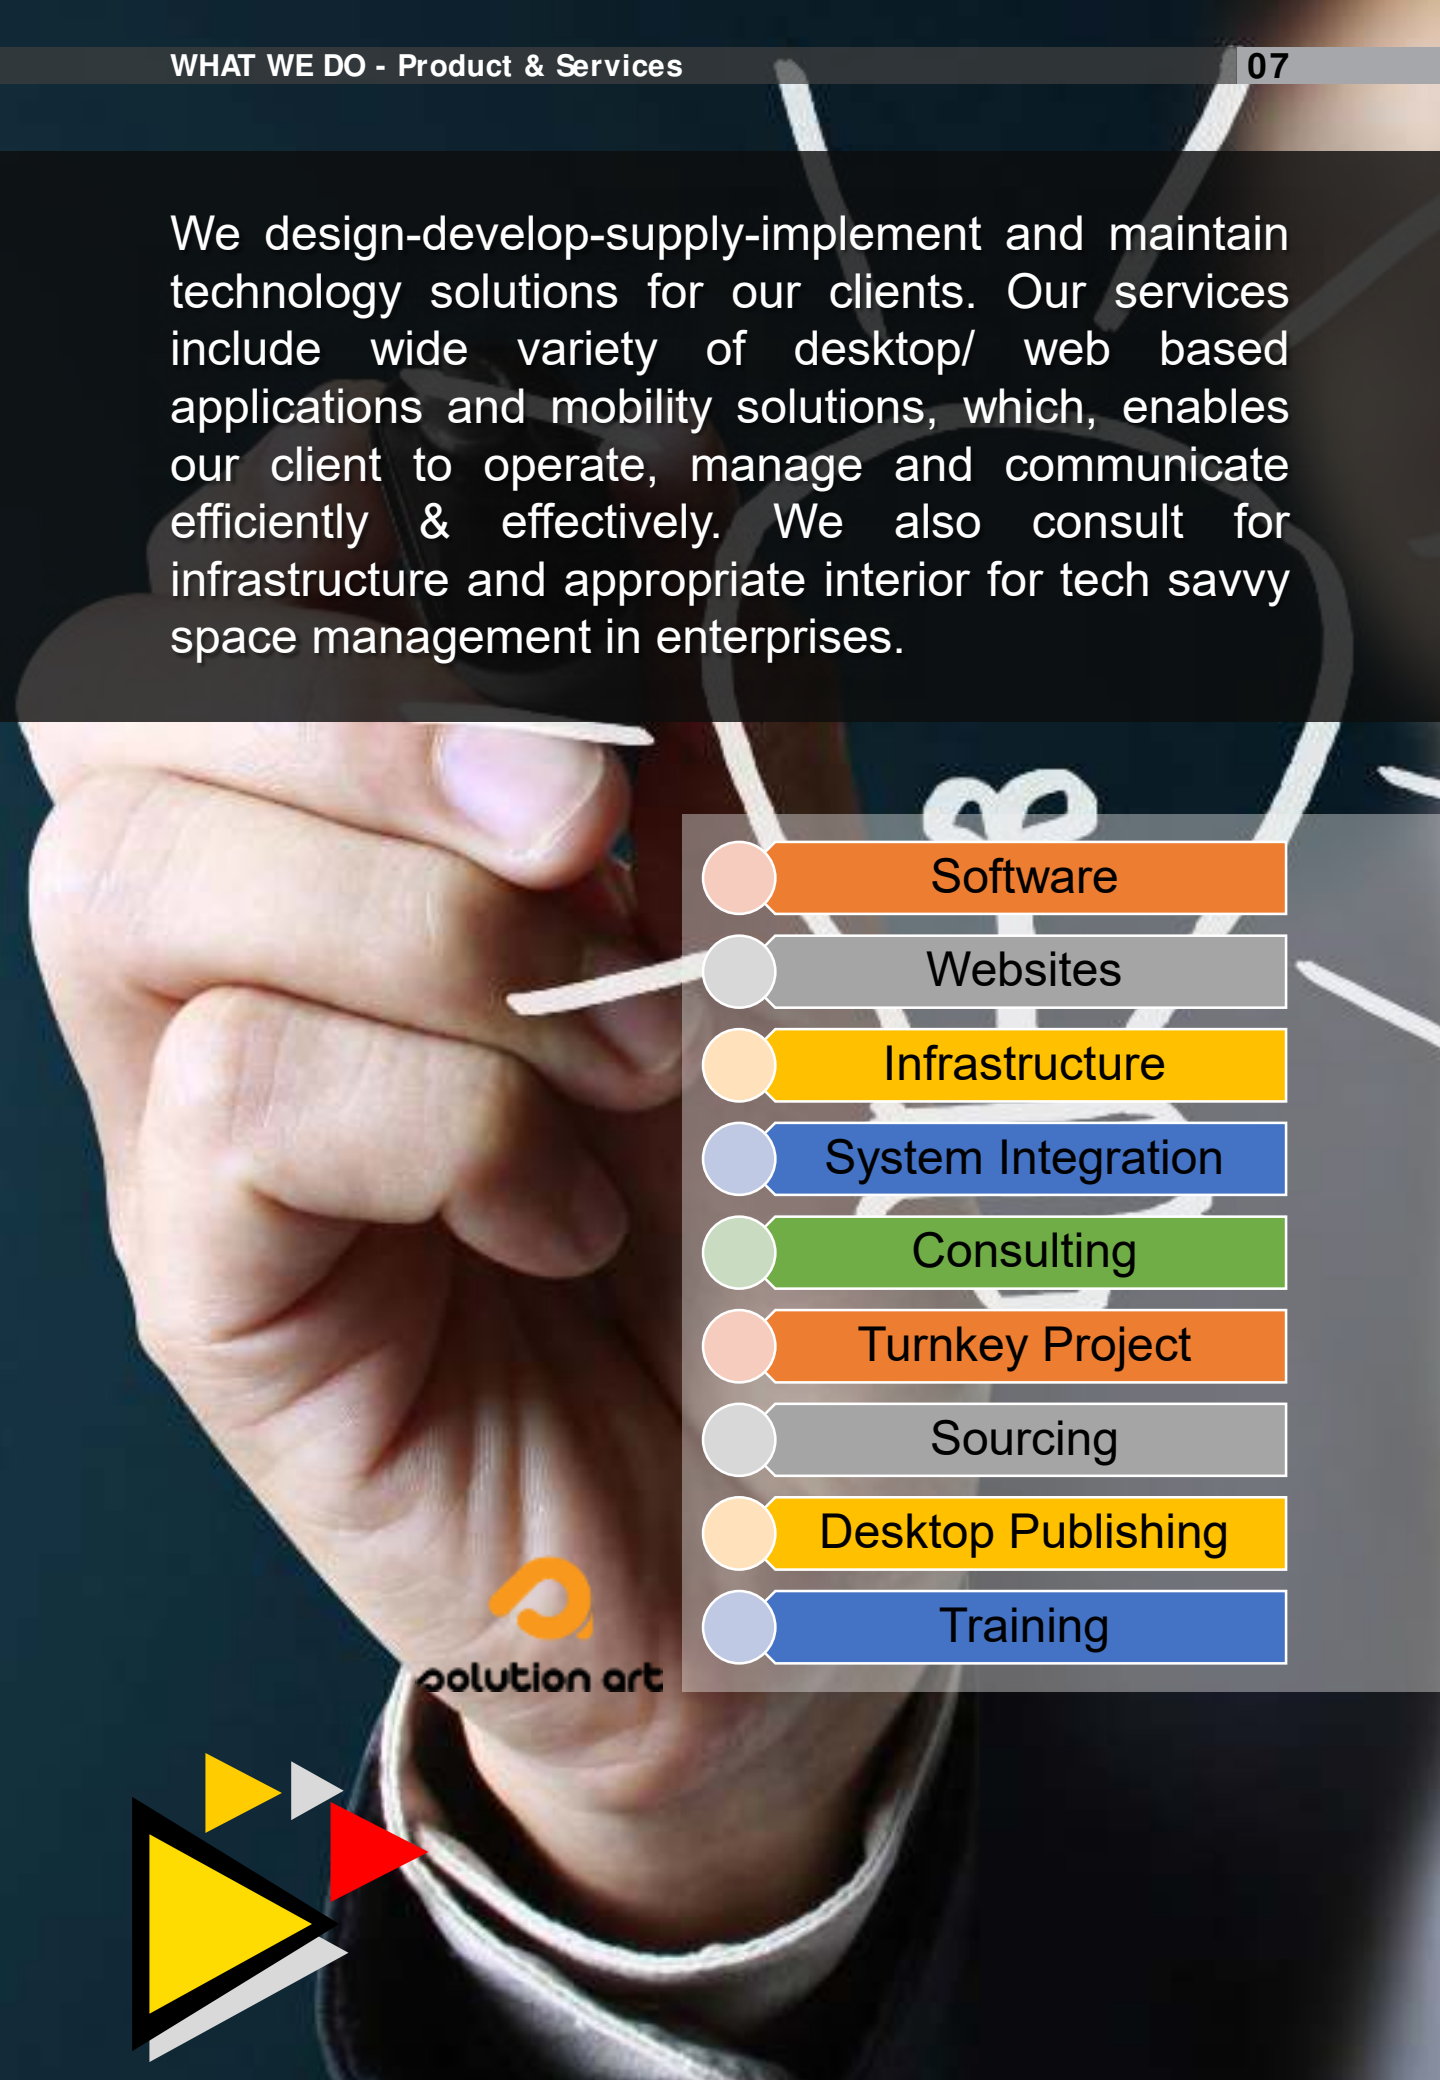

'Solution Art' is 'Solution Factory'

'Solution Factory' or 'The Factory' is popular name of Solution Art internally. We call it so, because as a process we take account of all our efforts as raw material, office premises as factory site and the computer and other technical items as machineries of factory. We make every effort to cook most suitable solution for our client following standard process and recipe.

As a solution developer and system integrator our primary responsibility is to produce 'right fit solution' for our clients need before delivery.

We design-develop-supply-implement and maintain technology solutions for our clients. Our services include wide variety of desktop/ web based applications and mobility solutions, which, enables our client to operate, manage and communicate efficiently & effectively. We also consult for infrastructure and appropriate interior for tech savvy space management in enterprises.

- 
- Software
 - Websites
 - Infrastructure
 - System Integration
 - Consulting
 - Turnkey Project
 - Sourcing
 - Desktop Publishing
 - Training

We focus on technological innovation to combine hardware, software and network effectively to fit our client's requirement.

Requirement analysis and mapping with strengths of technologies is crucial for success of any project.

We follow standard project management procedures and processes. User training and entering to support phase notifies project's success closure.

A few of many software projects will illustrate idea about our works

CG-RPMS (Coast Guard – Resource Planning Management System) Software

Client: Bangladesh Coast Guard Force

This is an enterprise resource planning (ERP) software keeps record of all operational domain of Bangladesh Coast Guard Force.
