

Ivive Labs

Ivive Labs is a bunch of Young, Restless and Creative people who always better the surroundings by implementing Industry's best tools, technologies and practices for Website Design and Development, Web Applications including Facebook and Mobile Applications, Internet Marketing including Keywords Research and Analysis, SEO Audit Report, Search Engine Optimization. We have been working on the web tools and technologies for almost a decade. While we serve our customers according to their needs, we do not let the opportunity go to intervene where we can add value even by pixel. And we are very keen to choose people in the team and try to hire only who have personal passion towards the work.

History

Though Ivive Labs started its journey at June 2012 but as a team we are working since 2007. Previously we were working for Blueliner Marketing Agency, NY as their offshore office team. But from June 2012 we re-branded as Ivive Labs and started our independent office.

Mission

Our mission is to provide the best possible Web Business Solution to clients that technology currently allows within the budget. And that's why we don't avail every other average opportunity that comes in our way because we don't like the word "compromise". Repeat business and long lasting relationship is very important and we strive to maintain that.
