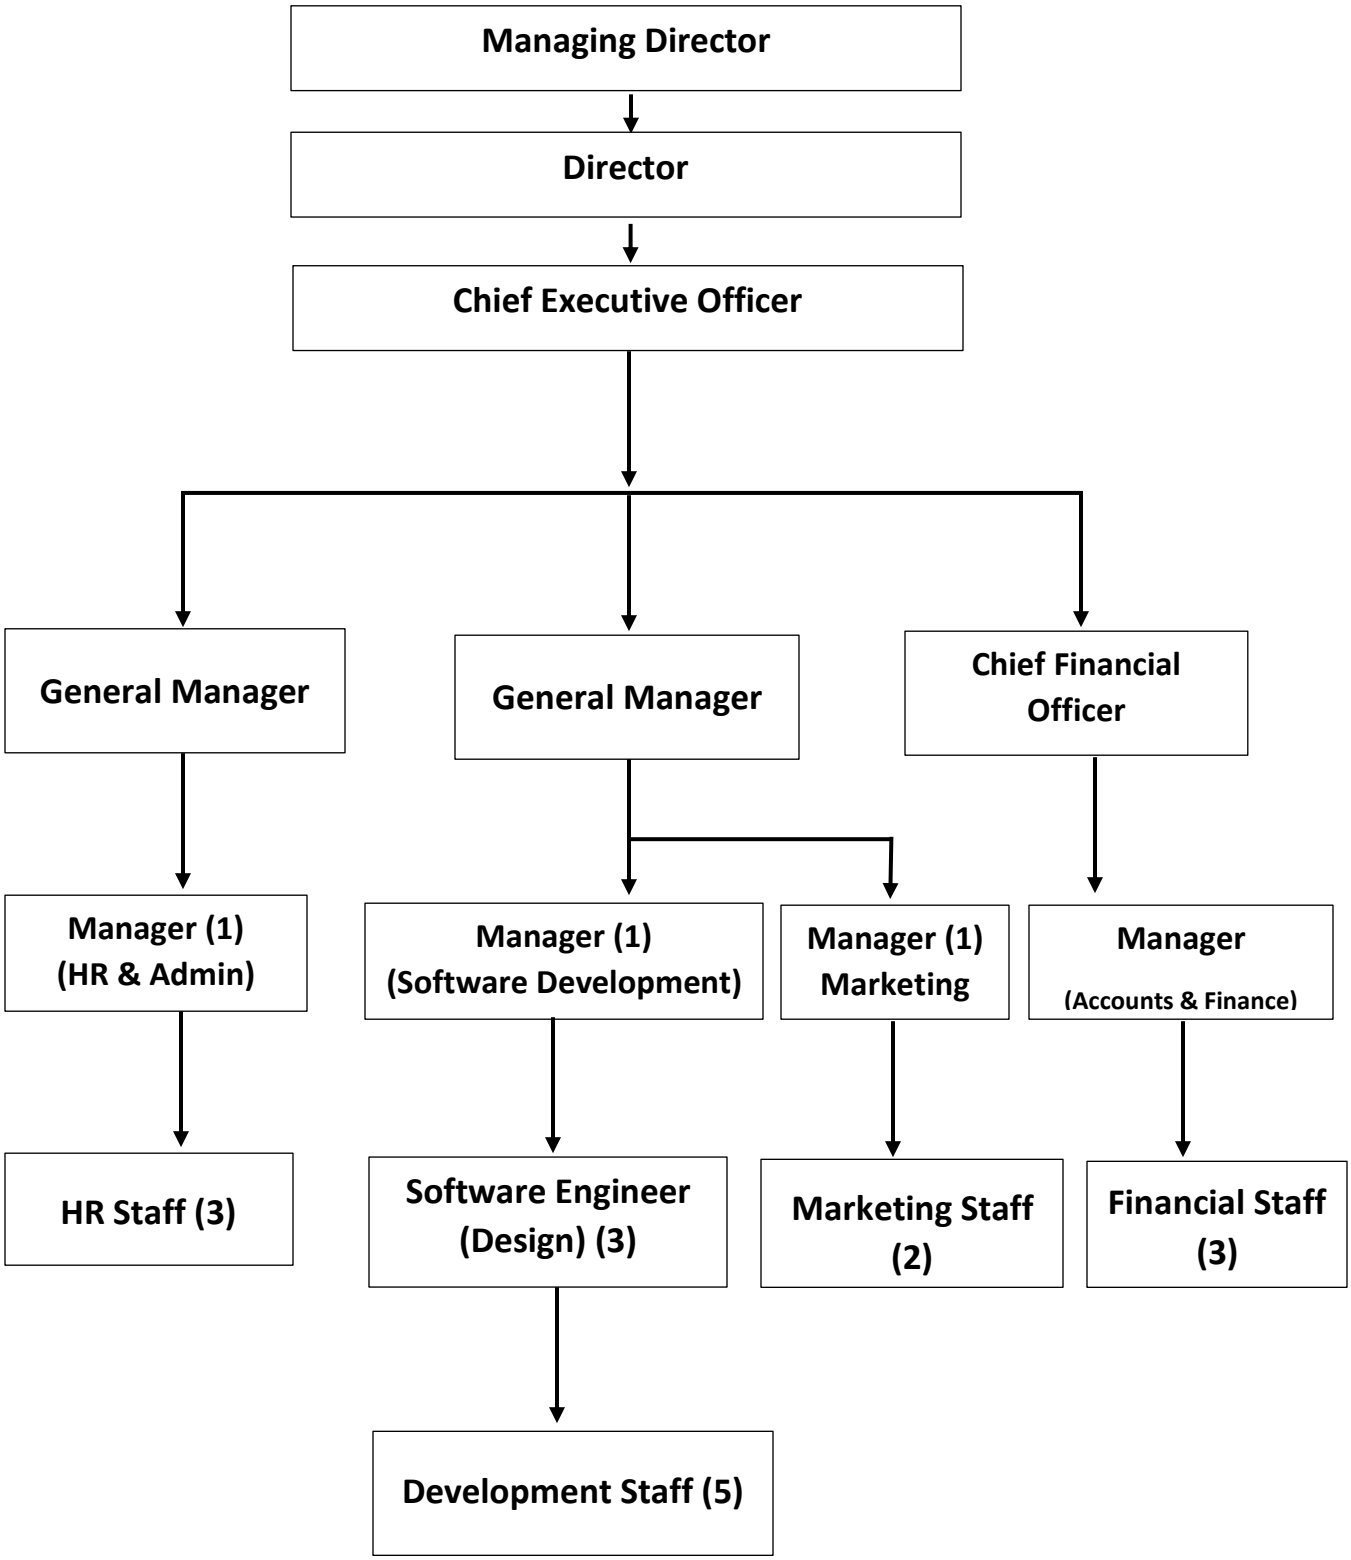
Hierarchical Structure of Gulshan IT & Infrastructure Ltd.



Services

Electronic Toll Management System

Electronic Toll Management System is a combination of specially designed and arranged solutions that work together to ensure error free, fast tolling system that supports an in-depth audit opportunity. The driver does not have to handle cash if they are registered in the system and also, they won't have to stop the car either. The solution allows the driver to keep moving in a lower speed while the solution take care of the toll calculation and collection. This allows the traffic to keep moving and can reduce to traffic jam at toll plaza at the time of heavy traffic. The advantages of our solution over commonly used process are:

- Reduce Congestion at Toll Plaza
- Automated Toll Collection
- Weigh in Motion
- Vehicle Classification
- Audit Option to Eliminate Fraud
- Extensive Reporting
- Dashboard for Monitoring Toll Plaza Performance
- 24X7 Support

Vehicle Inspection System

A Vehicle Inspection System is used to inspect vehicles to check if they are following the laws of the government. A collection of equipment helps conduct the test and collect data based on which it is checked to see if the car is road legal according to the law of the country. The inspection procedure has 3 stages and consists of 8 separate types of tests to provide a reliable test result. The tests are as follows:

- Visual Check
- Emission Test
- Speedo Test
- Axel Load Test
- Break Test
- Chassis Check
- Headlight Test
- Sideslip Test

Custom Web Application Development

Web applications are now allowing business to operate from multiple offices or even from outside offices without creating any barrier in communication and file management. They also help manage and run the business efficiently as they are usually custom built to match the business process of client. Our team of expert engineers works together with the client to understand the requirement and design a solution that matches the need of the client. The applications can range from as simple as an Accounting application that can be accessed from anywhere without compromising security to a major ERP application that can handle the data of a Multinational company operating in multiple countries and the management can view reports specifying different zones or country or full company.

Mobile Application Development

One of the modern wonders “The Smartphone” has connected the world in a way that was never thought of before. We believe in maximizing the impact of mobile application in world where almost 50% of the people connected to the internet are connected via a mobile device. We develop mobile applications that are not only smaller in size but also has a big impact on your business. Our engineers and designers put in their best effort to come up with the most user-friendly UIUX and then develop the application. As the number of people connected to internet through mobile devices increase the market size will only grow and branded mobile application can not only give your brand a boost but also can be used a platform for your business to catapult in to success.

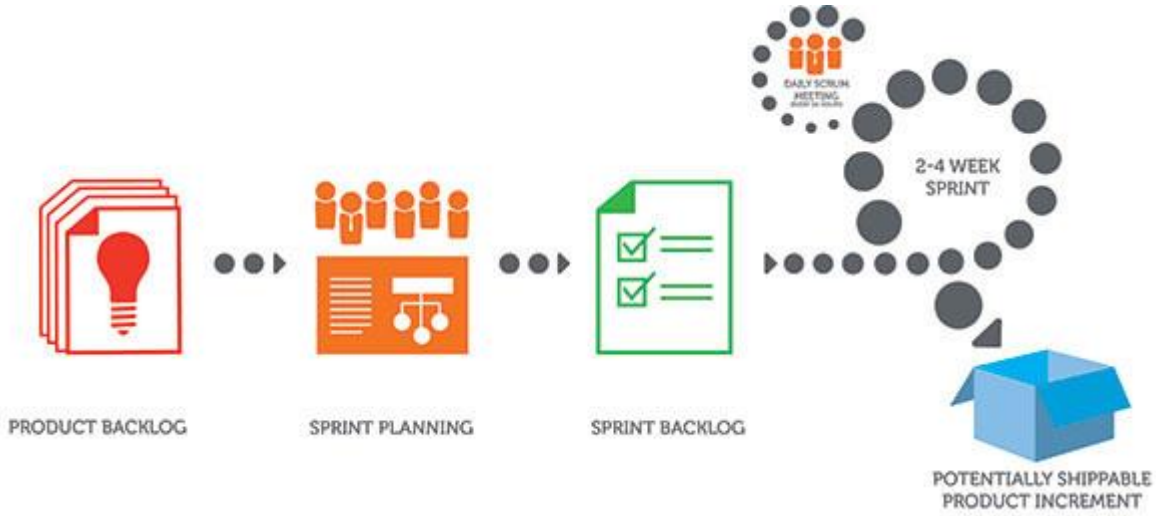
IT Consultancy

As an effect of globalization and due to the advantages companies in the world are interested in using web based solutions but nontechnical companies lack the technical know-how on how the design a solution that will satisfy their need. We like to share our expertise in IT industry to help our clients grow their business and make the right technology choices appropriate to their business. The goal of using a web based solution resource planning or business management is to introduce a higher level efficiency and more strategic decision support system to the business so the owner can concentrate on growing the business rather than getting exhausted running the business. We use our experience in resource planning and technology development to help our clients plan and outline their needs and requirements and design a solution requirement based on the outline.

Digital Marketing

In today's market stepping in to the digital platform is not enough. A company needs to take strategic and calculated steps to confirm a good ROI from digital platform. We offer our expertise of Digital Marketing to boost your business in the social media and online to ensure maximum reach to appropriate customers.

Product Development Methodology



- Analyzing the product/ feature requirement of the client or the application
- Product Owner will create a prioritized feature development list (or Product Backlog)
- Scrum Master and Product Owner will create a scrum backlog or a plan of execution based segmented in to short timelines for each task of product backlog
- Based on the set goals a Scrum Meeting is held to monitor the progress of the project. If needed corrections are added to the list.
- If any task from the Scrum backlog is unfinished before the end of the assigned time, it is completed before moving on to next task.
- AT the end of each Sprint Demo all necessary corrections are noted and added to the Sprint Backlog.

Why Choose Us

- Comprehensive research on target group for UIUX design
- We follow industry best practices for solution development & deployment
- Dedicated team for each type of application development
- We follow Agile Scrum methodology for product development
- Our applications are supported on a wide range of mobile devices
- We make applications that can run on both old and new OS for mobile devices
