Sk Al Murad

Founder & CEO

iTech Soft Solutions is a team of professional web developers who love to create modern web applications & websites which are functional, easy to use and beautiful to look at. Over the years we have been developing a great number of applications of different sizes and for different industries. Our industry experience includes e-business, automobile, real estate & finance. Each client challenge is different and each solution is unique. Our techniques and processes are tried and tested, and have been successfully implemented across different business sectors. Strong communication is the key to our success. By taking the time to understand your issues and intentions, we deliver strong results quickly and efficiently. We place great value on positive client relationships, and continue to review and modify our strategy as your organization evolves and new products or services become available. We remain committed to true innovation and to transforming marketing in the digital world.

Meet Sk Al Murad ,the founder and CEO Of ITECH. Speech from our CEO.. We, ITECH SOFT SOLUTIONS, are the company to ensure the future TECH WORLD through the software solutions development, specialized in web and mobile application development. We have the latest information skills/experiences and excellent human resources.

Want to create a game that works on multiple platforms within a short period of time, is efficient, has good rendering abilities and can be easy developed ? Then Unity3D is the platform which you ought to consider.

At iTech Soft Solutions we understand that communication is the most crucial aspect in running a successful project. We put much effort in this by educating ourselves and our employees and enthusiast you to participate with us throughout the project life cycle

Initiation

We listen to your story, which initiates the overall project planning and big-picture thinking. This is where your project team will state: “We would love to have our web solution to be able to...” or “It would be nice if it also works on an iPad”. Together we will prioritize all requirements based on your business needs. From this we will put up a big-picture planning together, the Functional Design and agree on the project duration and costs.

Kick-off

All the project stakeholders, at your side and at iTech come together to kick-off the project. We'll present the overall goals, introduce the key players and make sure that we all start off at the right foot.

Each task consists of:

A project task at iTech Soft solutions more than just ‘what to do’. A project task can be a feature, an inquire, an idea, a bug or a code review.

- Who will/is work (ing) on it
- When to work on it
- Priority
- Estimated work
- Progress
- Discussions on how to implement
- AUI/process sketch (if applicable)
- Any additional file attachments
- Code check-ins

After project completion

After project completion we sit down together with your project team and our technical business consultant to reflect on the project. We discuss how our two companies can improve their business together. We'll review what worked, what didn't and what we can improve the next time

With a focus on quality and best practice across each service area our goal is to consistently outperform industry benchmarks and the expectations of our clients

We always work Productive and Efficient

4 | page

Short track Milestones

To keep our focus on hitting the deadline, we split up our project in smaller pieces. This will give you a clear overview of what to expect throughout the project life cycle and it keeps us focused and motivated.

Estimation and progress

Every single change to our planning, we calculate our predicted delivery date. This keeps us continuously informed and warned in advance. As the delivery date is fixed, we put in all our resources to keep our promise.

In Practice

With almost 03 years of hands-on experience in software development, the founders of iTech have found the productive and efficient way to approach a software development project. With our background we have figured out how we can let a team of developers, together with all stakeholders, work in collaboration delivering great software

What to do

Every developer knows exactly what to do. The project manager/technical business consultant assigns each task, in collaboration with the team, to the right developer.

Reporting

Our-online-reports provide us and you a visual overview of the project progress.

**The most important concept in working productive and efficient
is to approach the work as you would like us,
doing the right thing and let the right people work on it.**

At iTech we have one goal, and one goal only-delivering great software on time and within budget. The “greatness” of the software is measured by your satisfaction. To ensure that, we need to communicate in a smart and efficient way

Daily stand-ups

Every morning the team comes together to review what has been accomplished since yesterday, what issues people are having, how to approach the solution and what to do to keep our momentum. We like it if you can join us to provide feedback and guidance.

Continuous interaction We are all creating something together and thus we would want to have as much feedback and guidance as the project needs. This will keep us sharp, efficient and productive. Therefore the consultants come together as often as needed. These meetings can take place with any of the stake holder any time when a new feature is ready for demo.

Unit tests

We continuously test our software and provide test results. With this we can anticipate on any bug sand you can feel safe that everything is going to plan. No surprises are there at the end of the project!

Continuous interaction

While our developers work hard to meet the deadline, everyone can put a code review request to see if that piece of code is what you expect. The code review could be done by a fellow iTech developer or by your Technical Developer. This Technical Developer could also request a code review, if he finds something he would like to be looked at by a iTech Developer

Documentation

We deliver-

- A developer’s manual
- A technical design
- An installation/configuration manual
- A user manual (if needed) and the code always consists of useful comments.

Our Skill

Over the last few years we have been exposed to some really cool framework sand technologies. We are passionate about technology and nothing excites us more than bringing amazing product ideas to life!

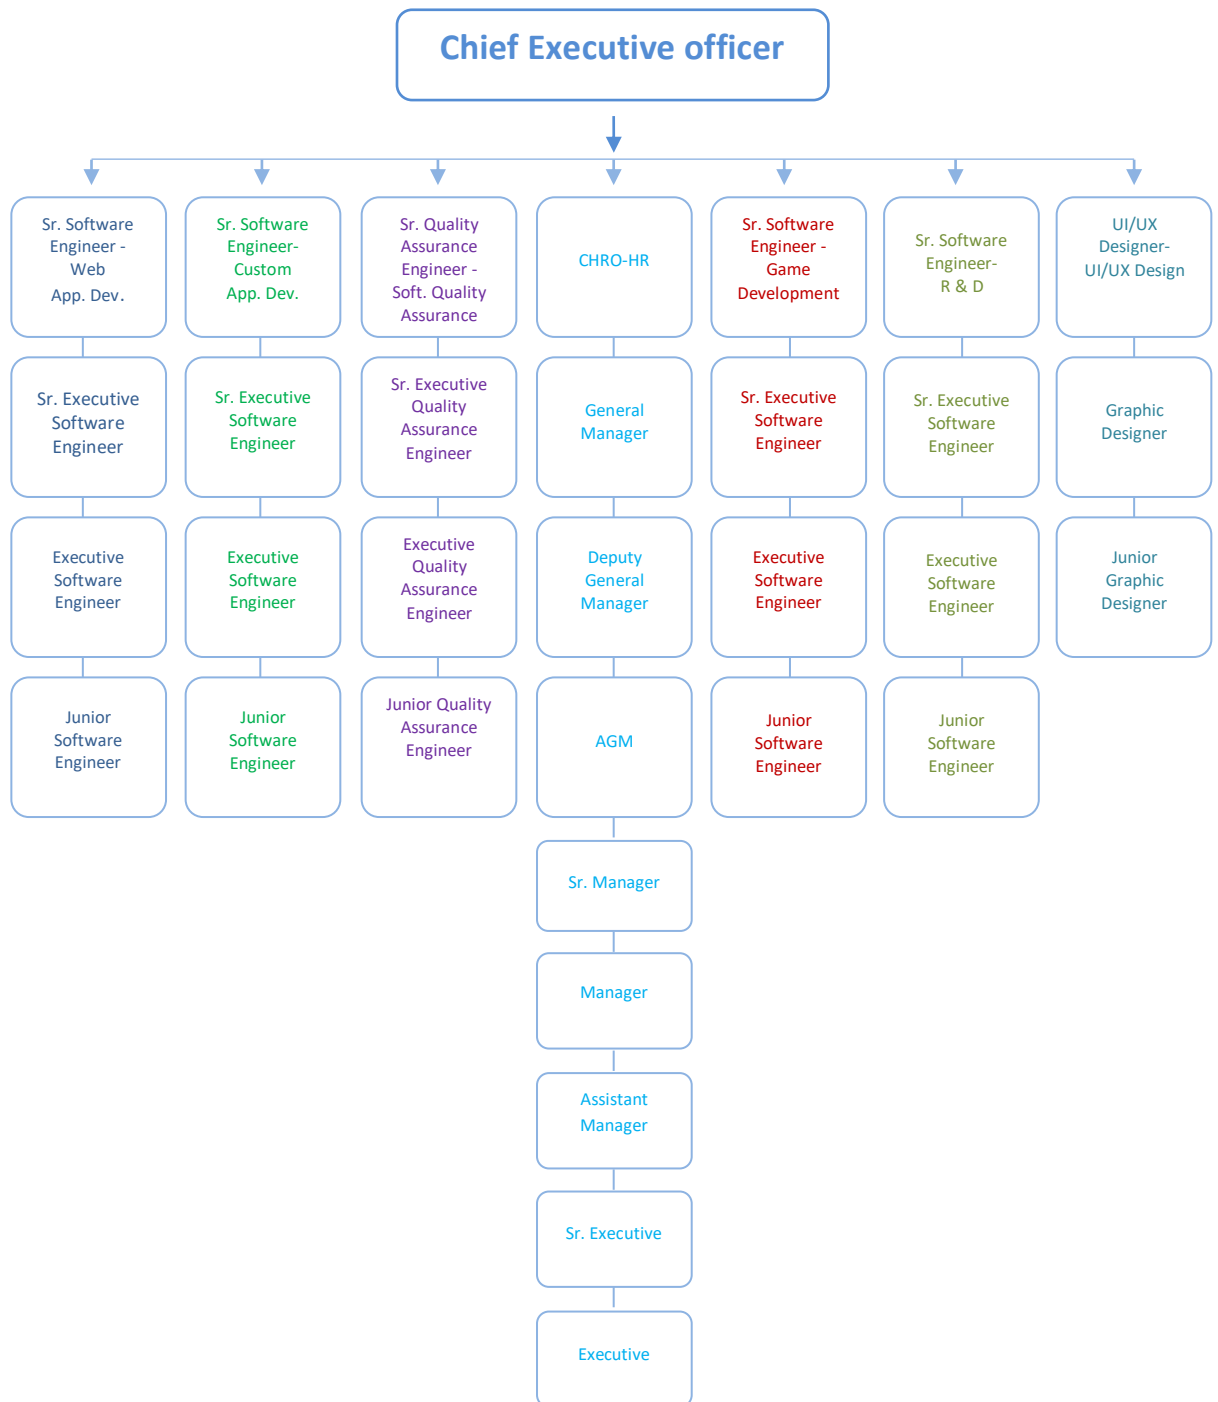

- **PHP**
Laravel # Symfony
- **UX**
illustrator # Photohsop

Organization Chart

7 | page

Once an organization has set its structure, it can represent that structure in an organization chart: a diagram delineating the interrelationships of positions within the organization.

We work with a number of clients worldwide and have experience working with a wide range of industry sectors, allowing us to give seamless provision of services in your organization. We work with our clients to assist them in achieving their commercial objectives.

Pedro Rui Silva

CEO and Founder of SETUP TECH

iTech worked with me to create a new site I am proud of, and can't wait to show off! From our initial contact, he was full of initiative, ideas and solutions. iTech remained enthusiastic, solution oriented and listened. If you want to create a site that you will love, in an easy and generative way, then I recommend you speak to iTech.

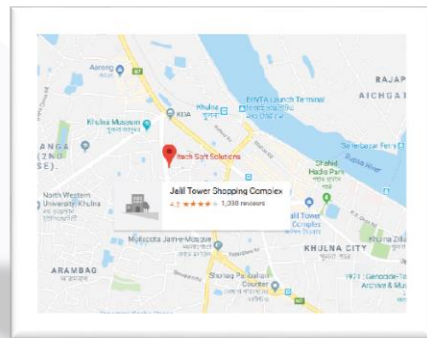

Janet Neal

Owner of superb woman Foundation

How's this: Last year I was launching a new business and required not only a website, but a community platform. Murad not only understood what I was looking for, he brought a clean, modern design to it. And above all else, he is a delight to work with! If there is ever an issue, he is on top of the solution quickly, without complaint. I highly recommend him and his work!
