Prachurjo Engineering Mobile Apps Development

Objective

The objective of Mobile Apps Development includes

- Enhancing the Trainees in Mobile Apps Development.
- Increasing expertise in Mobile apps Development and to acquire good command over all expression and understanding.

Development Methodology

A professional and comprehensive Needs Analysis for designing the Mobile Apps Development content will be carried out in order to provide the technical team with concrete data, and information to make informed decisions on the direction and activities of the whole Mobile Apps Development Training process. The Need Analysis will focus on to

- Identify the gap between current and required levels of knowledge, skills and aptitude.
- Identify what the general & specialized content of the training should be.
- Form the foundation of a training plan

The Need Analysis process will address some of the following questions

- What are the key skills gaps?
- What method/s of delivery should be used?
- How will training impact on the productivity, competitiveness and long term sustainability of the participants?
- How to integrate e-learning?

The following methods will be carried out for the Need Analysis and base line data

- Level Test according to measure the approximate Mobile Apps Development Skills level. The framework is the basis for developing any training and material on Mobile Apps Development Training. Level Test will be done on sample basis at different institutions. It will be used as the baseline skill level for the participating trainees'.
- Focus group discussion.
- Individual interviews.

Corporate Office:
39/KA, Pisciculture Housing Society,Shyamoli, Dhaka-1207, Bangladesh.
Mobile:- +8801712561719, SS
E-mail:- info@prachurjoengineering.com ceo.prachurjoengg@gmail.com
Website: www.prachurjoengineering.com

- Reviewing existing documents or resources that have been used earlier for Mobile Apps Development purposes for the similar type of participants.
- Discussions with relevant bodies (concerned with trainers)

A Research team with adequate experienced personnel from Mobile Apps Development and research sectors will be formed for the Need Analysis purpose. Client will be informed at every major step of the Need Analysis process.

Training Methodology

The Mobile Apps Development sessions will be interactive and learner centered, by following the latest approaches by global teaching-learning centers and institutions. Sessions will be different from usual lecture based or grammar translation based Mobile Apps Development classes. They will be activity based and learners will be going through lot of demos of real time applications of language for many various purposes. A systematic e-learning will be happening at some sessions to become familiar with 21st century learning.

Through the systematically developed modules, the Mobile Apps Development Trainer of this project will be

1. communicating with Mobile Apps Development Training to learners about academic, social, and personal issues;
2. encouraging and motivating Mobile Apps Development training to learners; and
3. Addressing the individual and diverse needs of Mobile Apps Development training to learners in both academic skills and Mobile Apps Development Training acquisition.

To make the project objective successful, six key strategies are structured for developing Mobile Apps Development training to learners' content knowledge, use of the Programing associated and interpersonal communication & presentation skills in Mobile Apps Development. Brief description of the teaching & training methodology is given below

Guided interaction: With this method, trainees structure lessons so Trainees work together to understand what they learn collaboratively about the learning concepts in the text. The interactions will be happening through – Group Work, Pair Work, Individual & Group Presentations.

Metacognition and Authentic assessment: Rather than having Trainees simply memorize information, Trainer's model and explicitly teach thinking skills (metacognition) crucial to learning new concepts. Research shows that metacognition is a critical skill for learning development applications. With authentic assessments, trainers use a variety of activities to check trainees understanding, acknowledging that trainees learning a development

application need a variety of ways to demonstrate their understanding of concepts that are not wholly reliant on advanced applications skills.

Explicit instruction: Direct teaching of concepts, development language, and reading comprehension strategies will be incorporated to complete training room tasks.

Meaning-based context and universal themes: Referring to taking something meaningful from the trainees' everyday lives and using it as a springboard to interest them in application learning concepts. Research shows that when trainees' are interested in something and can connect it to their lives or cultural backgrounds they are more highly motivated and learn at a better rate.

Use of audio, video and visual: The use of a variety of authentic audio, video and visual aids, including pictures, diagrams, and flow-charts, helps all trainees' —and especially Mobile apps development' —easily recognize essential information and its relationship to supporting ideas. Visuals make application development language and the content more accessible to trainees'.

E-Learning

Due to the ubiquitous presence of technology the pedagogy of teaching methodology has also undergone a sea-change. Infusing technology into education is really important as it caters the needs of the contemporary learners. The training room environment, today, is completely different from the traditional training room. The traditional methods which are mainly based on lecturing and rote learning reduce mobile Apps Development language learning to mechanical memorization and miserably fail in developing mobile Apps Development language as a skill among the learners.
With the support from our material 'Mobile Apps Development' we will be taking some sessions using online facility, depending on the allocation and availability of resources. The session will comprise regular class activities and the ongoing and course end tests. All the modules will be supported by e-learning facility for developing self-learning by the trainees'.
Institutions will be supported with e-learning content access prepared by experts as a part of after training support for continuous practice.

Web Development Module

The Web Development Module or the Apps Book will be the basis of the whole program. It will be carefully designed after having the Need Analysis data and the approximate Mobile

Apps

Development level test result of the participants. Because a highly-overburdened module or material will not be helpful in the learning process of any lower level learner or for someone, who does not have the requirement of the content.

Communication is of high profile for a successful development that is why we usually have two project managers assigned to the project. One of them, either a member of our team or your representative, is a local Project Manager who closely works with your team to ensure seamless information exchange and monitors the progress. The other one, the offshore Project Manager, is fully assigned to your project and is fully responsible for it.

If it is necessary, qualified technical consultant can be assigned to study your business process and your existing software.

Of course, we understand all the complexity of the development process, great variety of possible situations and requirements, individual sense of taste and other things. We will take whatever time is necessary to meet your expectations.

Quality initiatives at Prachurjo Engineering

Quality is an ever-extending goal - the better you are, the better you need to be. The management of the quality process is infinite, and marked only by milestones, never by completion! Prachurjo Engineering recognizes that, to fulfill our goal of self-evident quality, we need to constantly improve our deliverables to match the increasing expectations of our customers. With standardization is being the key to all growth - professional, personal and financial. Prachurjo Engineering reviews all its processes periodically and enhances them regularly.

We implement the Software Quality Assurance (SQA) that addresses the quality assurance needs at every phase of the development cycle. Our QA team has developed a focused quality control checklist. In addition, we also have a comprehensive Quality Testing Checklist which ensures that every solution delivered by Prachurjo Engineering measures up to the highest possible international standards.

Prachurjo Engineering understand the challenges of developing software's, application for mobile system

and accordingly, and for this we have defined and institutionalized the nominal set of practices that are used in every project in one or another form.

For the development of proposed 50 apps we will implement our tested mobile application development methodology, which goes over the subsequent steps-

Requirement Phase

This is one of the important phases for offshore software development project. For this we have experienced team of analyst they are involved in making clear understanding and requirement gathering of project.

Wire frames

Wire frames provide the detail description of each and every element of the project to make good understanding of the project. In this phase the requirements are stabilized before its start, we divide the project into several milestone by which the project become more transparent easy to work. In this phase only the graphical view of modules is made and service structure is prepared by this developer overview about the development phase.

Development

This is an important phase, after analysis the development work starts in this phase, the mobile application is developed keeping the target handsets in mind.

E-mail:- info@prachurjoengineering.com ceo.prachurjoengg@gmail.com
Website: www.prachurjoengineering.com

QA & Defects management

In this process testing is done, after development is made the application is tested which includes the testing of functionality, performance and design .in this phase only if the request of new

change comes than each new requirement is deeply analyzed by the before it is implemented in the system. All preceding phase will help to execute this stage successfully.

Deployment

This is final step of mobile development methodology ,deployment of mobile application varies with the applications ,in this execution of work is done which are based on the test plans and test cases & making a final report on the results.

Our process is tailorable and can be scaled to fit the needs of projects ranging from small development teams to large development organizations. Our Mobile development team has strong practice to make sure that we are doing our job prosperously. If you have any questions contact us we will provide best service to you.

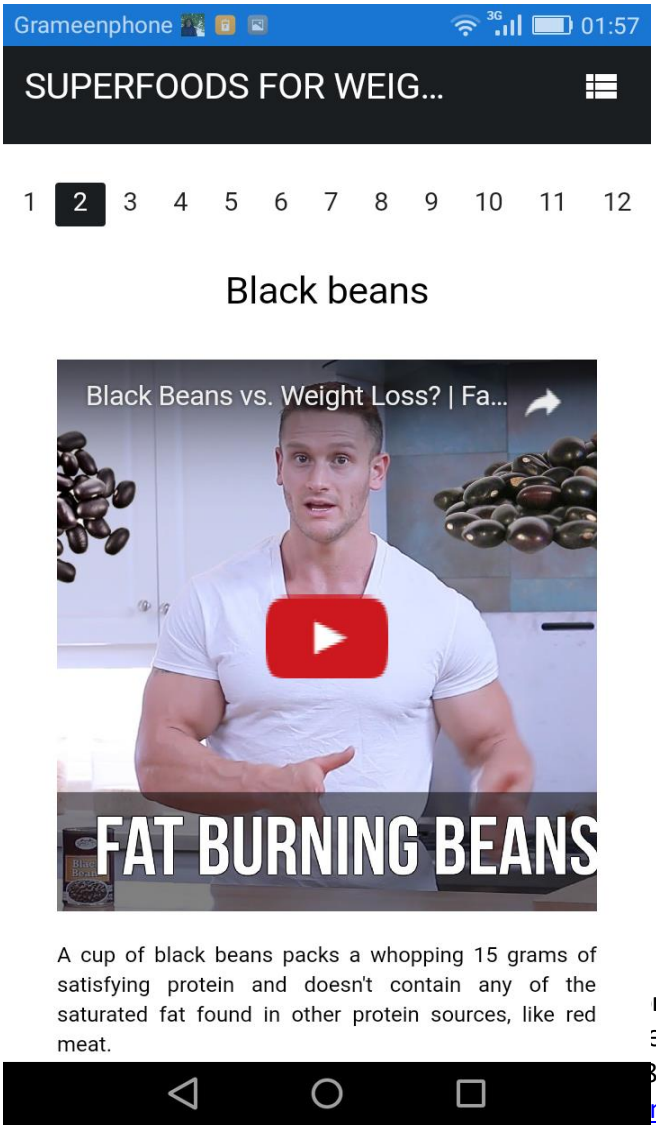
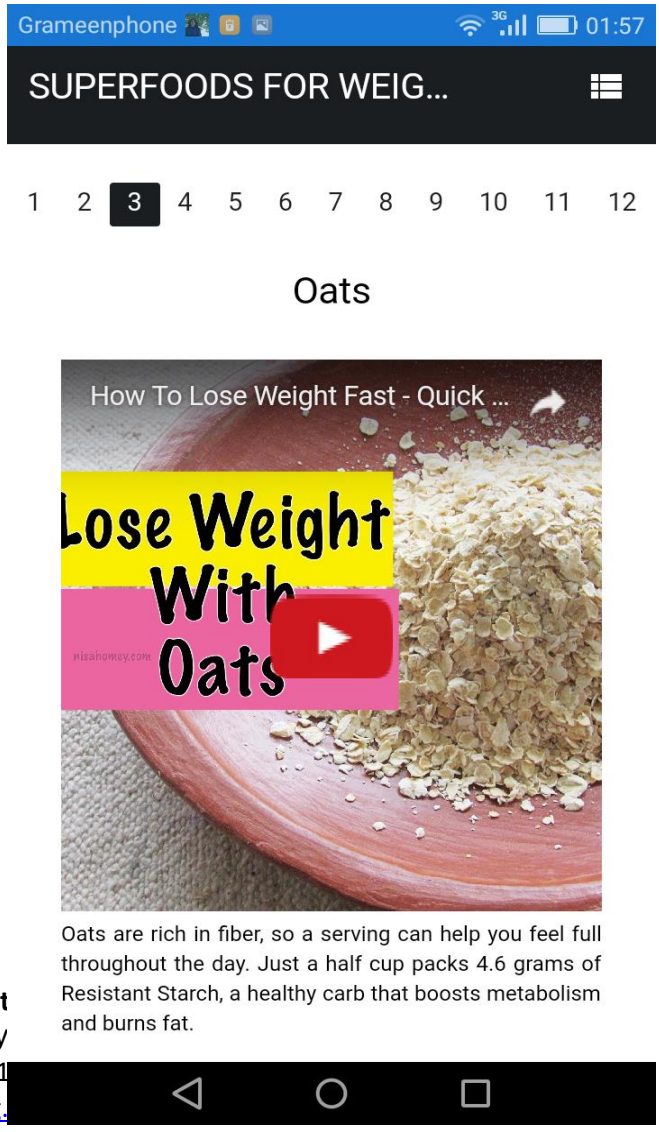
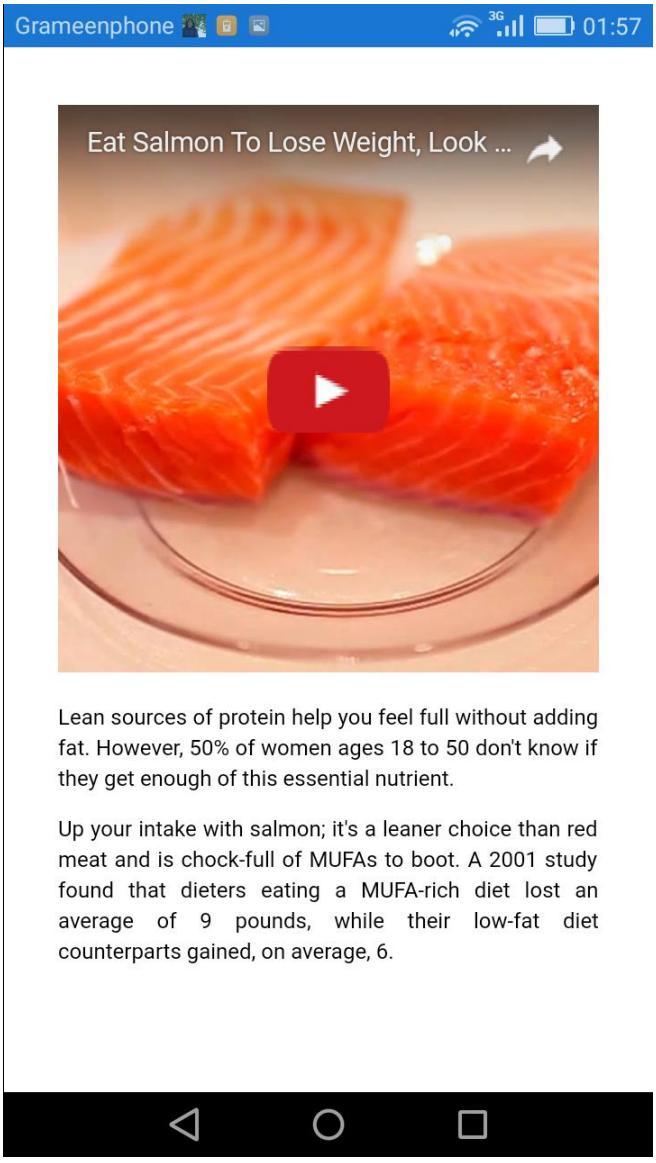
Our work for Mobile Apps

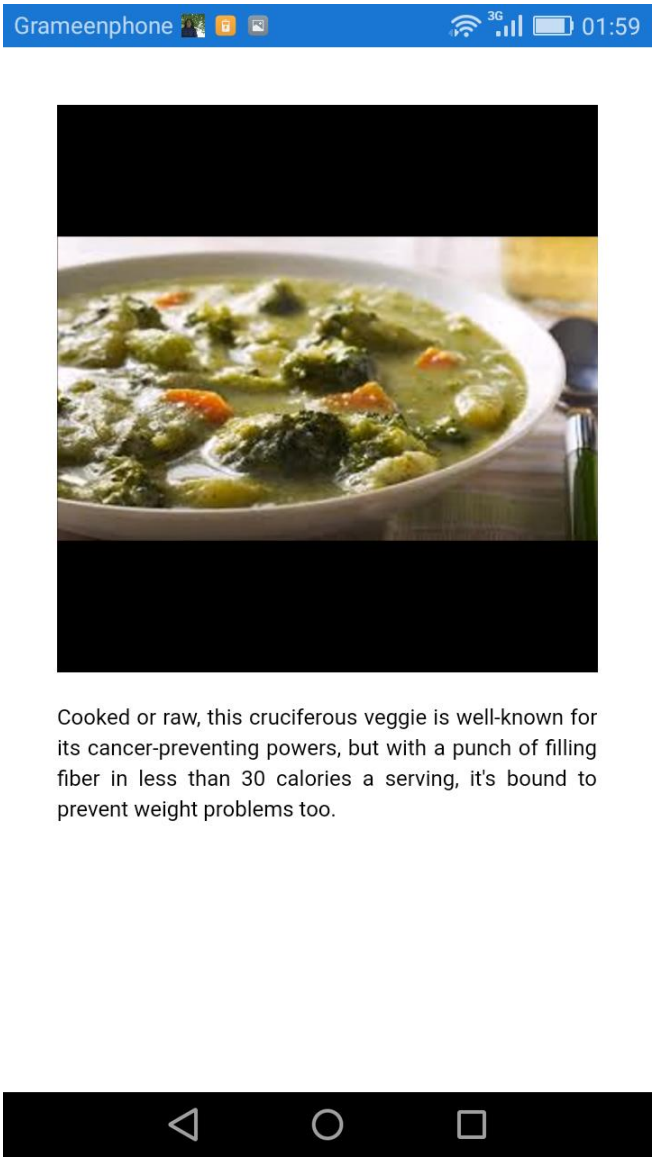






Lean sources of protein help you feel full without adding fat. However, 50% of women ages 18 to 50 don't know if they get enough of this essential nutrient.

Up your intake with salmon; it's a leaner choice than red meat and is chock-full of MUFAs to boot. A 2001 study found that dieters eating a MUFA-rich diet lost an average of 9 pounds, while their low-fat diet counterparts gained, on average, 6.



Cooked or raw, this cruciferous veggie is well-known for its cancer-preventing powers, but with a punch of filling fiber in less than 30 calories a serving, it's bound to prevent weight problems too.

Overview of the proposed game

Guess The Place game has more than 100 levels for 100 places around the world, Let users test their knowledge and guess what is the country or city of this place in the picture. It is an educative game We filled it with many features and make awesome design for it. it has leaderboard, some helps to help you to guess the place and share it with your friends, by all the social Media also it has admin panel to add new levels as you want instead of uploading new version on google play and more other features.. It will be soon on

Features

- Will Have more than 100 levels.
- Rate My App & Share.
- Help system.
- Sound Effects.
- RTL lnaguages.
- Leaderboard.
- New admob.
- Video tutorials.
- Easy customize.
- Prepared re-skin.
- Eclipse & Android Studio.

Tools to be used for the game

- Android SDK
- Android Studio
- Java Jee
- Application Programmable interface (API)
- Unity 2D

ight-To-Left language (Supports All Languages)

One of the nice features of this app, its ability to be converted to RTL language if you want like Arabic and you can do that in one step by changing lang Direction in file to rtl.

After that the app will be ready to use any RTL language, you need just to change alphabet with your language alphabet.

Also for making your life easy, we collect all texts in the app in file to change them easily without having to catch them in whole project.
