

ABOUT US

With the advent of intelligent and distributed systems, today's world demands data driven decisions, deeper insights and embedded intelligence. We are providing such solutions based on advanced technologies and infrastructure under InNeed Intelligent Cloud to meet the needs of the modern world.

OUR LOCATIONS

USA Head Office:
1601 Elm Street
Dallas, Texas 75201

BD Corporate Office:
Flat 8-M, KA-90, Pragati
Shaarani, Kuril, Dhaka
1229

BD Marketing Office:
1st Floor, House
5/4/B, Block A
Lalmatia (Water Tank
Road), Dhaka 1207

OUR TEAM

SHAMIM ASHRAFI
Founder & Chairman

MONJURUL ISLAM
Vice President & Director of Marketing

NASIM ASHRAFI
Managing Director, BD

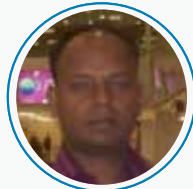

TAREK CHOWDHURY
Director, Business Development

ASSADUZZAMAN BABU
Director, HR & Admin

ZAHIDUR RAHMAN
Marketing Director, Media & Entertainment

EHSAN MOHAMMED
Marketing Director, Public Sector

NAFIS AHMED
Marketing Director, RMG

HASNATH FATHEMA
Director, Data Analytics

MAHBUBUR RAHMAN
Director, Development

KAMRUL HASAN
Sr. Cloud Solution Architect

KAZI SADMAN AHMED
Cloud Solution Architect

SAIFUL ISLAM
Cloud Engineer

IMRANUL ISLAM
Associate Cloud Developer

AREA OF BUSINESS

CLOUD-NATIVE SERVERLESS APPLICATION

Whether you want to migrate your stack to AWS, Google Cloud or Microsoft Azure, or you want to take a hybrid approach, you'll find us right beside you taking the heavy lifting for you so that you can sleep better at night.

MACHINE LEARNING & DEEP LEARNING

Years of experience in ML backed Intelligent system designing and implementation has given us confidence to offer this expertise as our top class service.

TEXT MINING & ANALYTICS

Driven by our big data expertise and powered by our custom NLP and topic modeling solutions, your business data can expose real intelligence for better customer engagements.

DATA INTEGRATION & BIG DATA

As the promise of Big Data technologies are opening new doors for us, our team is fully equipped to help you with your big data workloads.

VIDEO INTELLIGENCE

Mining in-video information, detecting human activity and tracking objects of interest from video streams is one of our top expertise.

ROBOTICS

Autonomy and Perception Engineering with ROS and AWS robomaker for robotics development, simulation, and deployment is our latest service.

OUR CLIENT & PRODUCTS

CLOUD-NATIVE SERVERLESS APPLICATION

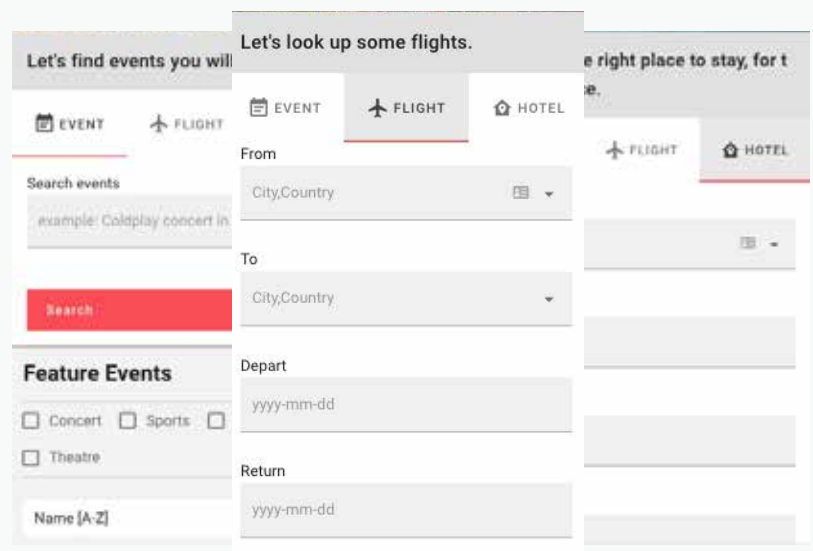

Serverless is the native architecture of the cloud that enables you to shift more of your operational responsibilities to a managed Cloud environment, increasing your agility and innovation.

RAVE IT

RaveIt is a Travel and GDS aggregator built on top of a Serverless stack. This is a product of Rave Travel Tech. It packages Events, Flights and Hotels using a Recommendation System.

MOMENTOUS

Momentous is a serverless online crypto-based community. It allows people to donate the idle resources of their smart devices to help the people in need.

The screenshot displays the RaveIt application interface with three main sections: "Let's find events you will", "Let's look up some flights.", and "e right place to stay, for t". The "Let's find events you will" section includes a search bar with the placeholder "Search events" and an example "example: Coldplay concert in", a red "Search" button, and a "Feature Events" section with checkboxes for "Concert", "Sports", and "Theatre". The "Let's look up some flights." section has tabs for "EVENT", "FLIGHT", and "HOTEL", with "FLIGHT" selected. It includes fields for "From" and "To" (both labeled "City,Country"), "Depart" (labeled "yyyy-mm-dd"), and "Return" (labeled "yyyy-mm-dd"). The "e right place to stay, for t" section has tabs for "FLIGHT" and "HOTEL".

OUR CLIENT & PRODUCTS

MACHINE LEARNING & DEEP LEARNING

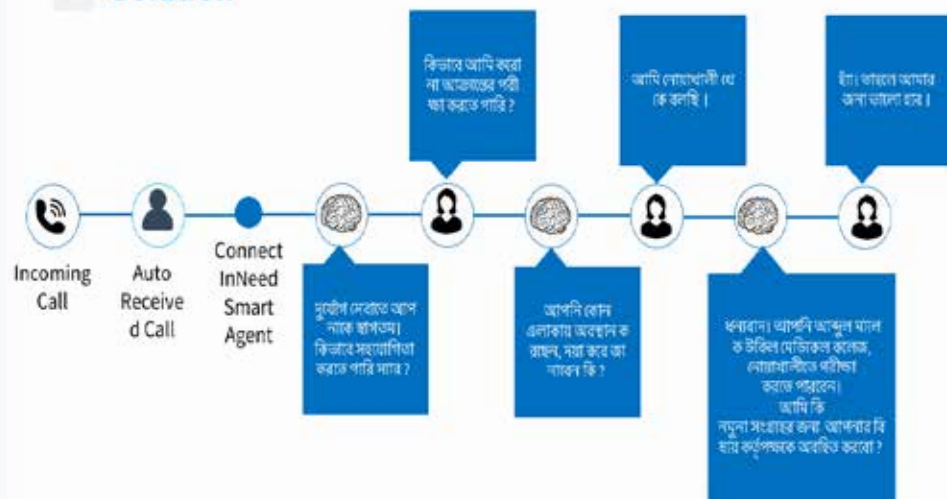

Our hybrid cloud deployment models enable our customers to quickly and easily build, train, and deploy machine learning models at any scale. It removes the complexity that gets in the way of successfully implementing machine learning across use cases and industries.

INNEED RAPID RESPONSE CALL CENTER

Intelligent and Interactive Virtual Agent who talks in Bengali to assist possible corona infected. Can receive queries through phone call and can answer interactively. It can handle unlimited load and can serve unlimited concurrent users.

MEDIA MACHINE

Media Machine analyzes the audio alignment between different languages and predicts the mismatch amongst multiple files of the same audio using Machine Learning. It is capable of detecting error thus increasing productivity.

OUR CLIENT & PRODUCTS

TEXT MINING & ANALYTICS

Text Mining & Analytics is the process of deriving high-quality information from text by identifying patterns and trends through means such as statistical pattern learning.

PATTIE

PATTIE (Publication Access Through Tiered Interaction & Exploration) is a text mining project that aims to examine publications and visualize relations among them through graphs using unsupervised machine learning.

MDL

MDL (Minimal Dictionary Language) is a project to facilitate human-bot conversation in the closed domain use cases. It aims to make the communication between a human and a bot as simple as possible.

OUR CLIENT & PRODUCTS

DATA INTEGRATION & BIG DATA

Big data is emerging and data volumes are growing exponentially, but your cost to store and analyze that data should not. We provide comprehensive tooling to help control the cost of storing and analyzing all of your data at scale, including features like hybrid cloud storages and features that help reduce the cost of your compute usage, like

DATA LAKE

We setup Data Lake that can connect to any existing data sources, gather data, find hidden insights, expose APIs and provide digital dashboard systems to efficiently manage and monitor medical patients at scale.

CLOUD ETL

We can move large amount of on premise dataset to cloud data lake for distributed processing and faster analytics extraction. Loading data from multiple RDS instances at once is possible thus increasing efficiency and performance.

OUR CLIENT & PRODUCTS

VIDEO INTELLIGENCE

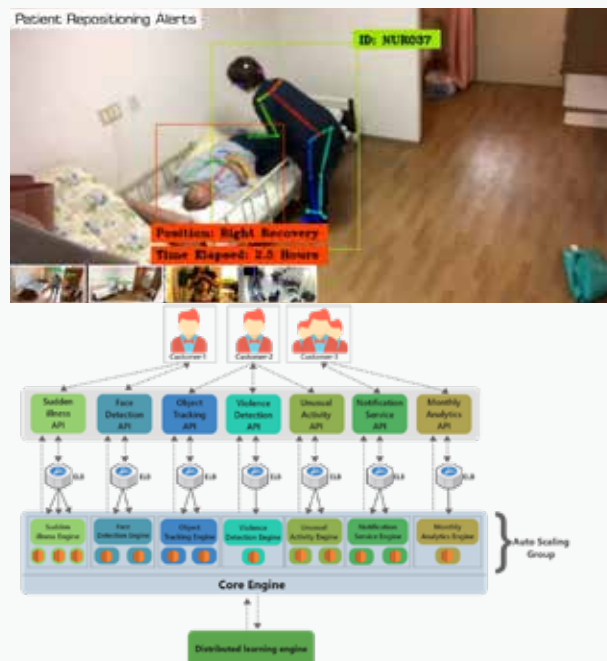

Our Video Intelligence service can analyze live video streams and generate analytics at real-time. It can identify, detect and track objects, faces, peoples, body movements and many more.

ELDERLY CARE

Our Elderly Care solution can monitor residents, track movements and scheduled treatments, detect accidents, identify potential hazards, and notify relevant authorities and management at real-time.

EMPLOYEE & INVENTORY TRACKING

Our Employee & Inventory Tracking system can detect, recognize and track personnels and objects at scale. It can detect and recognize hundreds of thousands of employees and inventories at real-time and track them.

OUR CLIENT & PRODUCTS

ROBOTICS

We facilitate cloud solution for robotics developers to simulate, test and securely deploy robotics applications at scale. Our team configured tools on top of cloud to provide a fully-managed and scalable infrastructure for simulation that customers can use for multi-robot simulation with regression testing.

GHOST ROBOTICS

Ghost Robotics is a USA-based autonomous robotics company. We partnered up with them to develop the AI-based autonomous system that helps the robot to take decisions to make bodily motor functions.

ROS

ROS or Robot Operating System is a set of software libraries and tools that help you build robot applications. We provide cloud-based ROS environment that helps robotics developers to run simulations and deploy instantly.
