Address business processes for which solutions are unavailable in the market.

E-commerce

M/S.J.MCorporation has an experience in the E-Commerce system development services, which help customers harness the power of the Internet in order to reap tangible business benefits. M/S.J.MCorporation offers end-to-end E-Commerce solutions to global clients. We integrate several ecommerce solutions.

CMS

CMS software solutions aim at simplifying the management of your website and making your website more efficient. CMS stores, manages and publishes content for all enterprise needs. Content is stored in the backend database. Our content management system lets you reuse and repurpose content in unlimited combinations.

To make your contents more efficient, we have used customized ck editor (for formatting). That's why users can easily search, manage and edit all the content in the system. You can also limit the number of users for the content management system.

The effective CMS solutions by M/S.J.MCorporation minimize company's operating costs and at the same time improve customer service. Websites will always be up-to-date; keeping the technological specs at the immediate use. Also No extraordinary programming skills required. It substantially saves time and money on frequent website maintenance. CMS is used for many purposes. Like maintaining large websites, maintaining intranets & extranets, maintaining knowledge management systems, etc.

Key Features:

- Non-technical contributors can edit pages and expand a site's content: no knowledge of HTML is required.
- A separation is maintained between a website's content, its structure and its visual design; a change in one of these can be done independently of the others. A complete visual re-design of a whole site can be done without touching the site's content or its structure.
- When new content is added, its visual appearance conforms to the design already established for the sort of content being added.
- When pages are added or deleted, the site's menus are updated automatically.
- Updates to the site can be made at any time by anyone with the correct permissions.
- Requirements for image sizes can be gracefully enforced.
- Best practice with regard to search engines can be gracefully enforced (page titles, meaningful URLs, correct metadata, etc).

- Changes made to the content of a website can be automatically posted to major search engines.

IT project and program management

With the majority of business development tasks carried out as projects and programs, it is important that these activities are organized properly. That is exactly what IT program and project management delivers.

IT activities that are not properly managed are a liability for any organization. Poor management typically results in loss of overview, bad decision-making or even totally failed projects – all of which are bad for business.

We help you design an efficient IT management framework

When your business accelerates or your strategy changes, your IT must follow suit. Our consultants have the experience and specialist competences to help you design an efficient IT management framework customized to your organization – to ensure that your setup delivers business results.

Low on capacity

Periods of leave, recruitment issues, illness or resignations among key employees. All private and public organizations run into periods when they are temporarily low on capacity or miss key competences on the IT front. Our IT management consultants can help you through such periods, making sure that your IT operations run as smoothly as possible.

Lean IT and IT Service Management

Professionalization of IT departments has been on the agenda in many public and private organizations during the last couple of years. IT has had to up their game and focus more on standardization, efficient processes, optimization and structuring – to deliver greater value for the organization.

A unique combination

When it comes to professionalization, we believe it is more important to get started and reap small benefits early on – rather than try to invent a state-of-the-art concept that takes far longer to develop.

At M/S.J.MCorporation we work with an extensive toolbox within Information Technology Infrastructure Library (ITIL®) and Lean IT and have long experience in employing these tools

with immediate effect. In fact, the combination of Lean IT and ITIL® has proven highly effective in taking an IT organization to the next level.

Our services within Lean IT include tools for working with improvements within the following five process areas:

- **Support and help desk**
- **Operations**
- **Software development**
- **Project management**
- **Control and governance**

System sourcing

Focusing on core competences and processes that create value and competitive edge. That is the clue to a profitable business. Consequently, tasks that are not covered by your core competences should be entrusted to others. This makes sense, but it might be difficult to put into practice.

M/S.J.MCorporation has extensive experience in helping private and public organizations strike the right balance between in sourcing and/or outsourcing of IT processes.

Our services include:

- Analysis that identifies the consequences of in sourcing or outsourcing specific activities
- Identification of relevant areas for in sourcing and/or outsourcing (e.g. development and system maintenance, operation, procurement and infrastructure)
- Identification of service elements and levels in SLA/OLAs and definition of subsequent concept for supplier management
- Assistance in connection with tender, identification of supplier and contract negotiations
- Assistance with the implementation of the in sourced/outsourced activities
- System procurement and identification of supplier

Cost-effective procurement process

When investing in IT equipment, systems or services, a lot of money can be saved by going through a well-structured procurement process. We recommend that you start by ensuring organizational anchoring prior to the procurement process. This way, you create the best foundation for an optimal process – and common understanding and acceptance of the expected results are established from the very start. When anchoring is in place, you're ready to find the solution and supplier that match your needs.

Services:

Training

To get the most out of your investment, it's important to ensure that you purchase products and solutions from technology organizations that provide both end user and administrative training. M/S J.M Corporation. can provide training overlay services for cloud solutions to ensure that your company gets the assistance it needs, beyond online tutorials from the cloud provider.

Administrative Training

To successfully take over post-implementation, it's important to know how to handle basic day-to-day moves, additions and changes for all of your company's technology solutions. Our team of trainers works with your administrative staff and provides crucial details on how to manage your solution. We also have fully managed service offerings that involve our team taking over the day-to-day responsibilities.

End User Training

It's extremely important to ensure successful end user adoption of products and solutions. Our onsite corporate trainings empower end users with guided and controlled courses that teach them how to leverage new technologies. End user documentation is also customized to fit the client's environment, focusing on the most-utilized features and eliminating the need to search lengthy manufacturer user guides for information. When deploying cloud solutions, some providers just provide end users with a link. CCS, on the other hand, we offers cloud training services: We'll send a corporate trainer as an overlay to provide more in-depth assistance to your organization.

Train the Trainer

Clients looking deploy desktop or mobile applications typically gravitate towards our "train the trainer" program. Our team will enable your key contacts for each department to train their peers and team. Not only can this help with workstation or mobile application deployment, but it also provides an effective solution for companies that have multiple shifts and/or can't shut down an entire department for training.

Customized Software and Web Development

Programming Technology Proficiencies

- ASP.NET
- Visual Basic - All Flavors
- C# - All Flavors
- Java
- Javascript
- HTML
- Web services Development
- PHP
- Perl
- Erlang

The IT sector is filled with tough decisions that require a balance between the performance you desire and the software you can afford. M/S.J.MCorporation helps you optimize the decision making process through consultation with a team of proven software professionals who are experienced in creating powerful, affordable software that meets the individual company's needs. Our team will work with you to develop the most meaningful and executable strategy you can afford so you don't have to sacrifice overall effectiveness for cost effectiveness.

We utilize SQL expertise and other database development technologies to help your database function more efficiently. We understand that there is much more to a solid database infrastructure than storage space and coding. Our professional teams are trained to create a database management strategy that considers your overall workflow, departmental needs and existing database. Let us set up a database that is easy to manage and minimize the manpower required to do so through efficient design and a secure setup.

For smaller projects, we recommend Waterfall Methodology with a careful early planning phase that transition smoothly into the design process. We begin this strategy with a phase of gathering all the plans and requirements necessary for execution. The design phase follows, during which our team will work with you to ensure that your goals are implemented in a reasonable long-term plan. The implementation phase is done with the utmost care and attention to detail. Throughout the entire process, we utilize careful testing to ensure that everything is working as it should. One of the strongest aspects of the Waterfall Methodology is that each face has a clear cut beginning and end, so you always know where you stand. True to

its name, each stage of this strategy moves fluidly into the next while still allowing time for necessary corrections to be made.

For larger projects, we utilize the Iterative and Incremental Development Methodology, which allows us to create a cyclic planning and design system. This strategy can be applied repeatedly to various aspects of your business and integrates the Waterfall Methodology into its segmented planning stages. With either approach, you can expect our designers to carefully analyze and design your code with your custom needs in mind.

SQL and Database Development from M/S.J.MCorporation .

M/S.J.MCorporation delivers custom Internet database application consulting, database development and design-build engineering services on the MicroSoft SQL Server, Postgres, and MySQL platforms in various countries. We specialize in custom database solutions built on the SQL Server database and .NET framework.

When you work with M/S.J.MCorporation to develop your customized software solutions and web development strategy, you are working with a team of professionals well versed in AS.NET, Visual Basic, C#, Javascript, HTML, PHP, Perl, Erland and a host of other webservices development applications. This versatility of skills is what allows us to develop a custom strategy that not only meets industry standards but is custom-tailored to help your business thrive.

Database Technologies

- **Microsoft SQL Server 2000-2008**
- **Oracle DBMS (all versions- PL-SQL)**
- **MySQL**
- **MongoDB - Horizontally Scalable Database System**
