

GeekPicker Limited Company Profile

Developing Finance.

GeekPicker Limited is an international software development outsourcing company which specialises in developing complex, ultra-secure, and user-friendly platforms for various niches of the financial services industry.

GeekPicker is a fast-growing software development company based in Dhaka, Bangladesh. The company was initially established in 2017 as an offshore software development house, dedicated to developing proprietary technology a Czech payment processing platform. Over time, the number of projects under management grew and the scope of expertise required to maintain them increased. In 2021, Geek Picker Limited was established as a Czech and Bangladeshi joint venture limited company and is dedicated to serving the needs of a few select clients.

Clients

GeekPicker specialises in providing bespoke software development and IT outsourcing solutions to payment service providers, financial services companies and investment firms based in Europe and worldwide.

PayPipes

PayPipes is a payment management system which offers solutions to both merchants and payment service providers. The platform connects with over 100 payment gateways and is ready to be integrated with any website or platform.

Walletory

Walletory is a Stored Value Facility company which provides an e-wallet business program helping customers, merchants and service providers benefit from the platform's secure, modern and fast technological infrastructure.

Services

GeekPicker is equipped to support the entire lifecycle of software development. We assist clients with everything from wireframing & prototyping, backend & front end development, web services & complex systems integrations, and quality assurance & services assurance.

The four main areas where we specialise are:

- **Design:** Our creative and diligent UI/UX designers ensure the apps and websites we design are responsive, easy to use and follow the latest trends.
- **Development:** We specialise in building complex platforms for the finance industry, which must meet the strictest security standards and meet stringent regulatory requirements.
- **Integration:** As the world of finance becomes increasingly digitised and open the number of collaboration and integration opportunities grows. We actively manage dozens of integrations with leading banks and financial institutions.
- **Support:** As our clients' businesses grow, more challenges arise. We make sure we're on hand to give the best possible support. Whether it's troubleshooting or investigating complex issues, we'll find the right solution.

Skills & Technologies

GeekPicker uses the safest, most reliable and advanced tools and technologies available today to achieve the best possible results for tomorrow.

Server-side	Client-side	Web Services	Design
● PHP ● Laravel ● WordPress ● MySQL	● JavaScript ● React Native ● CSS ● HTML ● JQuery	● JSON ● REST ● HTTP ● XML ● Postman	● Illustrator ● Photoshop ● Miro ● Gallery.io ● Adobe XD

Communication is one of the most important characteristics our company holds. Every team member and the client can expect informative workspaces to ensure every contributor and stakeholder in the project knows precisely what's happening at each moment of the day. We rely on tools like Jira, Github and Slack to share information promptly.

Working for GeekPicker

Currently, the GeekPicker team consists of ten members, but our headcount continues to grow as the projects we manage to become more successful and increase in complexity. Every member of the GeekPicker team interacts closely with our European partners as we collaborate seamlessly in all areas.

The integrated approach allows GeekPicker to function as an extension of our partner's workforce rather than an external vendor. The GeekPicker management fosters an environment that merges the best European and Bangladeshi cultures have to offer. The company maintains a workplace on par with the highest European employee welfare standards.
