OUR SERVICE:

E-BUSINESS

E-Commerce: We deliver fully integrated e-Commerce solutions by providing organizations with the technology and capability B2C, B2B, B2G and G2C transactions. Our innovative e-commerce solutions enable businesses of all sizes to realize the full potential of enhancing their corporate strategy with an e-commerce strategy. Our e-commerce solutions have open, scalable architectures, which allow enterprises the maximum flexibility to evolve their e-commerce systems with minimal technology constraints.

E-Government: We deliver fully integrated e-Government solutions that transform the way government does business by providing tools for improved information and service delivery. Our consultants help increase government efficiency, improve citizen satisfaction and improve public sector employees' job satisfaction. We also focus on providing the business and citizens with easy access to government information that allows them to participate in the decision making process and conveniently conduct transactions with government.

Open Source: We help organizations reduce costs and minimize business risks by helping them choose and implement the right Open Source technologies to solve their business problems. Our Open Source team is experienced in developing and deploying open-source business software solutions for content management, intranet portals, document management, customer relationship management (CRM), and business intelligence.

Application Development: With our custom Application Development solutions, we assist both businesses and government to deliver on their business strategies to the end, especially when packaged software does not adequately address their requirements. We have the required expertise in industry-standard technologies like HTML, C#, PHP, JavaScript, XML, RSS, Java (J2EE), .NET, SOAP, and SQL. Our team of developers will deliver custom application development solutions within the context of your business objectives and strategies.

ICT CONSULTING

Research & Data Analysis:

We provide a full range of quantitative and qualitative research services, working with clients in both the private and public sectors. We embrace both traditional and technologically advanced research methods and provide reliable statistical data and indicators regarding ICT readiness, use and impact. Our ICT statistical data and indicators are developed to be comparable at the international level, in order to allow developing countries to benchmark their information economies with those of developed countries and to take policy decisions to narrow the digital divide.

ICT Policy Development:

Our approach to ICT Policy development is to assist ICT policy makers in developing countries with the information and expertise needed to develop effective national ICT policies and strategies. Our services include the development of e-commerce and e-government policy and strategy at the national level. We accomplished this through the engagement of our consultants with the key stakeholders involved in the particular policy issue being addressed and to share lessons learned and best practices regarding ICT policy development.

Business Continuity:

We assist organizations to develop strategies that protect every kind of information within the enterprise with solutions that are gauged to its specific business value. We offer a wide range of business continuity offerings; from simple, low-cost back-up-to-disk solutions to state-of-the-art local and remote replication capabilities. Whether your goal is to protect your core business from disaster, achieve regulatory compliance, or ensure high availability, we have the solution for you.

SME-ICT Competitiveness:

We offer a full range of consulting services to Small and Medium Sized Enterprises (SMEs) wishing to reap the full rewards of Information and Communications Technology (ICT). Our services include developing national strategies aimed at encouraging the use of ICTs among SMEs, the identification of opportunities to foster technology transfer to SMEs, and the promotion of entry of SMEs into the local market/sector for product and service delivery nationally, regionally and internationally. We also assist SMEs directly in the transformation of their businesses through the use of ICT.
