

Company Profile

Company Overview:

iHealthScreen Inc. is startup company formed at USA and later it opened office in Bangladesh by issuing trade license on 2nd November 2017 in the name of Innovation Place Bangladesh. Since 2017 it has been operating health and education related software with advanced technologies such as artificial intelligence-based prediction model for stroke, heart disease and eye disease along with telemedicine and EHR facilities, online live teaching and exam system. On 20th July 2020 it changed company name to iHealthScreen Bangladesh Limited and issued a new trade license.

iHealthScreen Bangladesh Ltd aims to develop novel, innovative software for retinal image grading and diagnosis of diseases and screen diseases - to detect at an early stage. We developed a system for early screening of Diabetic Retinopathy (DR) and Age-Related Macular Degeneration (AMD). Based on this work, we also developed a prediction model for screening individuals at risk of systemic diseases such as Alzheimer's disease (AD) and CVD. A retinal imaging-based system will screen these diseases from regular visits to Family Physician, Community Clinics, Optometrist, or Ophthalmologist.

iHealthScreen Bangladesh Ltd also developed three separate education platform such as one to one live teaching system, online exam platform, a complete management solution for school, college, university.

Our Mission: iHealthScreen looks to harness the power of artificial intelligence (AI) and retinal imaging to have a HIPAA Compliant platform for early diagnosis of eye and systemic diseases. iHealthScreen offers low-cost and cutting-edge technology to facilitate large-scale screening of conditions, and consequently, save vision and lives.

Our Vision: iHealthScreen looks to achieve hassle-free early detection services and preventative medicine to patients for better efficiency, more convenience, improved odds of keeping vision, and to save lives.

Area of Business:

iHealthScreen Bangladesh Ltd provides health and online education services to customers.

MyHealth: This is a telemedicine platform including electronic health record system (EHR) and artificial intelligence-based prediction system for Diabetic Retinopathy (DR), Glaucoma, Advanced Macular Degeneration (AMD). Based on EHR input system can predict stroke and heart disease. Telemedicine is initially intended to treat patients using these facilities who are located in remote places, far away from health facilities, or in areas of shortages of medical professionals.
