SOFTIN TECHNOLOGY LTD.

Company Profile

General Overview

Softin Technology started its journey in 2005 by launching an in-house server based accounting and financial management solution software geared mainly toward small and medium sized businesses. With the growing demand for online application the company modified its products based on cloud technology, and in 2011 launched Account-Care, fully online business management software for managing varied and diversified business entities such as manufacturing industries, hospital/clinic (general and specialty hospitals) restaurant/food service, club/association, NGO and other diverse business fields and activities. Account-Care online Point of Sale (POS) module replaces a retailer's cash register, tracks its inventory, sales, and customer information. Broad options now include versions for manufacturers, wholesalers, professional service firms, contractors, non-profit entities and retailers.

In 2018 the company has been incorporated as a private limited company and renamed Softin Technology Ltd. (STL).

Account Care is the brand name of our business management solutions.

We introduced Account Care Hospital Management software in 2017 and it is currently being used by a few general and specialized hospitals of good standing. Our hospital management solutions cover general administration of the hospital and patient service management starting with registration, OPD consultations, admission, OT management, discharge, bill/invoice generations integrated with overall accounting/inventory management and other modules as per requirements of specific hospitals/clinics.

The online version allows a user access through a secure login via a web browser. Account-Care Online is supported in all devices such as desktop, laptop, tab and mobile phones on Chrome, Firefox, Opera, UC, Safari, and also accessible via Chrome on Android and Mac operating systems. One can also access Account-Care Online via iPhone and Android mobile OS.

Account Care is dynamically made which can be customized to suit the specific industry requirements. Our products are market and/or users demand driven and tailor-made to fulfill clients' unique requirements. Softin Technology is continually striving to modify and update the products to keep pace with the fastest growth and development in digital technology. Account Care is user friendly and easily grasped by a new user and, therefore, enables one a quick start of the software operation saving the time needed for

prolonged training. Our staff comprises dedicated individuals that have professional experience in a wide variety of industries including technology, healthcare, social services, manufacturing, finance, construction, logistics and supply chain. They have come together to develop and distribute powerful software solutions that meet the unique needs of today's complex business activities.

Our programmers are skilled in making use of the latest languages, platforms and methods and in the development process they are supported by consultant system analysts who are qualified in SAP and Oracle ERP software implementation. This gives us a comparative edge over many similar service providers in the industry.

We encourage third-party software developers to create programs that fill niche areas for specific industries and integrate with Account-Care.

Our service and support team always provide an excellent after sales service as and when needed including a complete training package. Customers' satisfaction is our ultimate goal. Commitment, devotion to work blended with business ethics and respect to our clients' needs have earned us a good name as a reliable IT solutions provider in the management of businesses across diverse business/industries.

Of late we have developed VAT software integrated with our account and financial management solutions making a complete package to facilitate preparing financial reports and returns with greater ease obviating laborious calculation. Please visit www.softintechology.com.

Custom Product Process

In most of the cases our standard solutions need some customization in the process of implementation in any organization. When doing that we follow the methodology as mentioned below:

Analyze

Our system analysts analyze the current system of a prospective client organization and try to identify the specific needs or the problems one is trying to solve. We closely and thoroughly work with the team designated by the client organization to fix the SRS first. After thorough analysis of the requirements of the client organization we start the design phase of software development.

Design

In the design phase our specialists design concepts and prepare flow process charts and then carefully design the software structure. After that the same is presented to the

concerned management officials of the client organization. After approval of the design by the organization's management the development phase starts.

Customization/development

In this phase programming, testing, documenting, and bug fixing are involved in creating and maintaining applications. Our developers use most advanced platforms as per the design requirements.

Implementation & Support

Once the product is ready the same is implemented. Our experts work in close concert with the users designated from the client organization and implementation and support phase continues till the time the client is fully satisfied. After complete delivery and implementation after sales support and service phase starts as per the terms and conditions of the contract.
