About Us

CodersBucket is a company based in Dhaka, Bangladesh, that serves cloud application solutions, software solutions, mobile application development, data management systems, and technical support to businesses in the country and abroad. It was established in 2020 and houses prime IT experts dedicated to providing first-rate services to promote entrepreneurial progress.

Our Mission

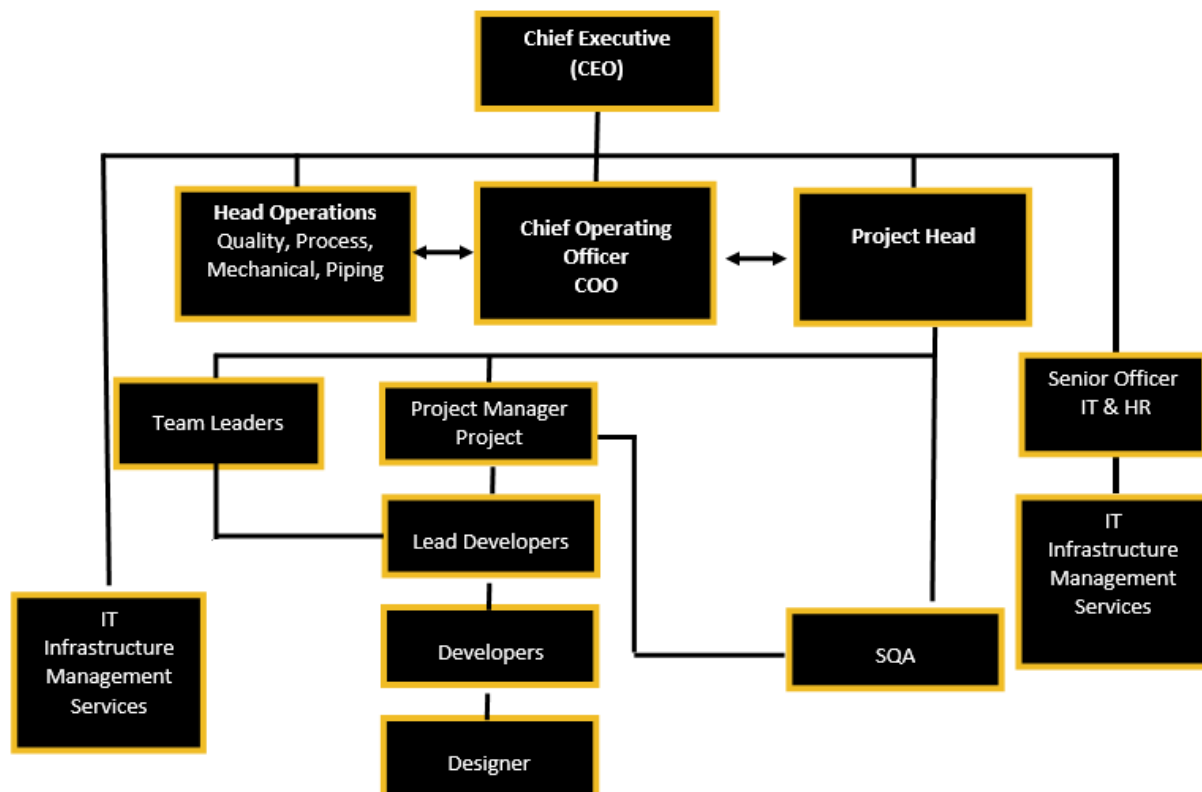

Our mission has always been to serve large scale expandable cloud solutions with long-term, durable, adaptable, and fitting programs and technical support to every company who needs it to fulfill their goals and achieve success in every endeavor through the expertise and teamwork of our teams.

Our Vision

Our vision is to be a household name as prime advancement providers in the field of technology to businesses, developing efficient, sustainable, and reliable solutions to all their needs.

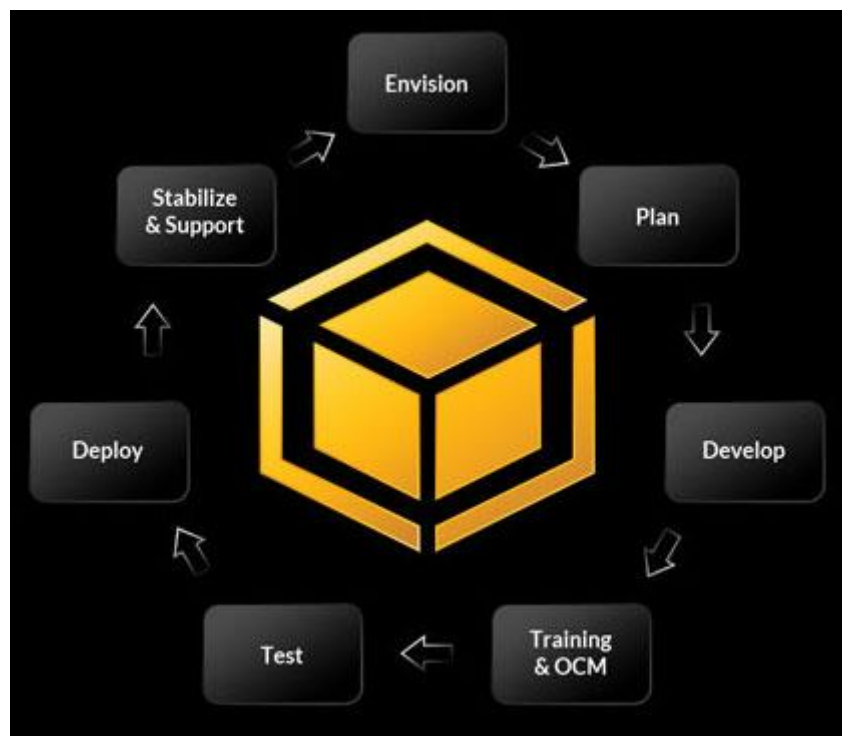

Organogram

CodersBucket is a strong solution provider committed to innovation and service excellence.

Logical Approach

Our approach is simple; from concept to completion, we guide you through marketing strategy, website navigation, visitor data-basing for email marketing, design, layout, and how to attract targeted search engine traffic.

What we Develop

We don't just focus on crafting beautiful and user-friendly applications, we offer over a decade of commercial web development experience. Having in-house software developers allows us to have complete control over the quality of work we produce, which gives our clients total confidence in the finished result.

LARGE SCALE CLOUD APPLICATION

Our primary expertise and experience lies in developing large scale web applications that follow the distributed architecture and are heavily incorporated with Amazon Web Services. We have years of experience in delivering complex business applications that generate colossal user interaction and gain huge client satisfaction.

From generating ideas to delivering outstanding results, we maintain a very strong project management process and deliver clear goals to our clients. We follow state of the art coding structures, design patterns and testing methodologies. Moreover we maintain clear communication with our clients through project management tools so that in any stage of the development process, they know exactly what is going on.

We commonly work with PHP and Python for our distributed cloud architecture. We are experts in developing React front end. We use MySQL, PostgreSQL and MongoDB as our database. Most importantly we use whatever is safe and secure and meet the requirements of our clients to deliver a fast and secure solution.

Our backend is built in such a convenient way that any frontend can connect with it. Be it a simple HTML web front or a complex mobile application, everything gets smooth connectivity with the core application.

MINIMUM VIABLE PRODUCT FOR STARTUPS

Supporting startups from the beginning with planning, technological requirements, business analysis, and software development and adjusting the progress accordingly over time is one of our core strengths in CodersBucket. We help startups create a Minimal Viable Product (MVP) to start their business with less investment and risk in IT Infrastructure and build this over time sensing and forecasting the business nature.

ECOMMERCE APPLICATION

We have built a fast and secure eCommerce application to serve the needs of small businesses all the way to large scale ecommerce giants. Our ecommerce platform is primarily using AWS with a distribution model which scales automatically and serves all the purpose of an ecommerce business.

We custom build the platform for companies that need everything in their own way. These don't serve as existing ecommerce platforms where you do not need most of the features that reside idle in the system. Moreover we are connected to different social platforms to manage the product and sale simultaneously.

CUSTOM BUSINESS APPLICATION

We have delivered a number of custom business applications for Small and Medium businesses over Canada and USA. For these applications, we primarily focus on the clients requirements to improve the business process, adding marketing and sales modules, improving content quality and digital marketing flexibility. We have various products in our brands that can satisfy a good number of business sectors like Software Companies, Small e-store businesses owners, Rental Companies, HR companies, accountants and much more.

MOBILE APPLICATION

In recent years, as a part of our Large Scale Cloud Application Development, we put a serious effort in mobile application development. Our mobile app team has put through some amazing large scale data impacted mobile applications nationally and internationally that brought us good reputation. We primarily develop mobile applications on Flutter and React Native to meet the latest trends and updates of those platforms. But we never neglect the advantages of native android and ios applications and have experience in building with those platforms too.

WORDPRESS DEVELOPMENT

Wordpress has given us a quick and multi-dimensional approach to website development. Lot's of Small/Medium business owners and startups start their journey with wordpress. This type of website development is cheap and you really get to know the market well. We have built an enormous number of wordpress websites most of which eventually moved into larger ecommerce/custom software development in their growing state.

We never consider a wordpress website development as a cheap/easy development, rather we encourage our clients to dalitate their ideas into the market with a solid website

development. We even use wordpress as a part of our distributed development model where it serves the frontend users.
