

About Us:

Pipeline Bangladesh Ltd. is a software development and cybersecurity service providing company which is a sister concern Singapore based company. The company offers software development and maintenance services for global and local clients. The company was incorporated on 10th September 2020 based on the Japanese management's experiences from implementing security solutions for customers that became Development and R&D center in Dhaka, Bangladesh. Our ambition is to be known in the marketplace for the quality of our work and the elevated level of our product and services. This we achieve through continuously improving our company culture, project management and knowledge management routines within and across our client teams.

Software Development

Pipeline Bangladesh Ltd. helps customers to create diverse and complex software solutions for your business needs. Listening to your ideas, we implement and create custom software solutions from scratch, designed especially for your business. Pipeline Bangladesh Ltd., customer get quality software and perfect service every time.

Cyber security Product/Services

Pipeline Security is a trading name of Pipeline Bangladesh Ltd. From ransomware to phishing sites, from hacking threats to data leakage suspicions, and from insider threats to all aspects of command and control, our agency is the one-stop-shop to all your security concerns.

Each month, PIPELINE Bangladesh identifies thousands of phishing sites, Malware sites (command & control, credential drop sites, drive by download), fake Domains, Command & Control Servers, Botnets and more. We provide the best threat data in the industry, backed by The Spamhaus Project an international organization, based in both London and Geneva, founded in 1998 to track email spammers and spam-related activity.

Our success in helping companies scale their business processes is a result of our focus on building a global team of truly exceptional talent.

- Attracting people that fit into our tight-knit
- Making personal growth a core value

- Focusing on top quality training
- Creating motivating performance-based career paths
- Incentivizing quality and service excellence

What Makes Us Different

Everything we do at Quintinites is based on business growth. You probably assume we mean our own growth. Actually, we mean yours.

Our Story

We grow your business while improving your customers' experience. Each one of us, from our CEO to our analysts, takes personal responsibility for delivering excellent service which, in turn, creates a seamless experience for your customers.

As you may already know, this approach is unusual amongst BPO companies — and it's not the only thing that sets us apart.

Automation & RPA

Many BPO providers are pushing back against automation. We're doing the opposite, because cutting-edge RPA technology streamlines processes, reduces costs and increases your flexibility to scale up rapidly according to changing needs.

Robots are the future, and this makes humans more valuable than ever. So, we combine the two. A perfect blend of creative, intelligent humans plus robotic automation gives your business massive growth potential.

PIPELINE Security is the trading name of PIPELINE BANGLADESH. LTD.

House # 282/A, Road # 19/C New D.O.H.S. Mohakhali, Dhaka 1206

Our Strength

Pipeline Labs is another sophisticated name that used for the website of Pipeline Bangladesh. The glorious achievement is graphically depicted here.

Global Project

Pipeline Labs has several branch offices in North America, in Finland and in Singapore. So we can provide clients with flexible support for their global development projects.

Global Project

We can provide clients with flexible support for their global development projects.

Japanese Quality

Based on more than 16 years of various project experiences in Japan, we are capable to develop the quality software which can meet the expectations of domestic clients.

Cost Leadership

Though the price of offshore companies is increasing, average cost of Bangladesh engineer is 1/9 of Japanese and around 1/2 of Indians. Even compared with Chinese or Vietnamese, development can be done with much less expensive cost.

Our Services

Accelerate Machine Learning & AI Operations

We joined many AI introduction/utilization projects which were conducted by the new business team in listed companies. Since Deep Learning is cutting-edge technology, in order to carry out the project, it's still necessary to read huge volume of articles and theses in English.

PIPELINE Security is the trading name of PIPELINE BANGLADESH. LTD.

House # 282/A, Road # 19/C New D.O.H.S. Mohakhali, Dhaka 1206

hello@pipelinesecurity.net | www.pipelinesecurity.net | <https://www.pipeline labs.net> | +81-3-4405-5766 |

Our engineers from Bangladesh where average score of TOEIC exam is No.1 in the world (score 895, in 2014) are good at learning new technology in English, and their profound knowledge in AI are often praised and pleased by clients for the superiority compared with other companies.

The cloud will significantly improve access to data, computing power, and speed. This will allow companies to scale AI faster, achieve business outcomes, and transform into sustainable growth. Can be accelerated.

How about starting from prototype?

One of the most frequent requests to us is, "We'd like to expand our business by utilizing our own data. Can you help us?"

After organizing a dedicated development team for the client, we'll work, searching the most appropriate purity and amount of data, algorithm and etc., through trial and error.

Cloud operations & support

Our approach puts your business needs first, creating industry-specific solutions to get you moved to—and benefiting from—the cloud now.

Move to the cloud with us and you'll find new and better ways to harness the power of cloud computing. From migration to cloud management, we work with you to help your business realize its full promise and achieve measurable, extraordinary value.

Our Cloud Operation Services

- Storage & Backup management
- Cloud Security & Health Monitoring
- 24*7/365 NOC Monitoring
- Cloud Application Management
- Cloud Computing Services
- Cloud Baseline Management
- Cloud Security Testing

Cloud Support

Automations can scale and heal, but sometimes human intervention is needed to quickly get you back up and running. Our skilled engineers can respond to alerts 24/7 and take the right course of action, limiting your exposure to downtime

Database Architecture & Construction

Clean, consistent, and comprehensive data is the hallmark of successful companies in the 21st century. How you collect, sort, organize, and safeguard that data all comes down to the architecture solutions integrated within your software ecosystem. Our technology experts offer the needed technical skill and services to engineer masterful solutions that help your business get the most out of its data.

Benefits of Database Architecture Services

To stay competitive, companies need fast, reliable databases that are both secure and easy to maintain. Advanced database architecture services from an outstaffed engineering team offer your company the best of both worlds - high-quality development without the hassle of hiring and onboarding new employees.

Business Application Development

Massive investments in data science teams and machine learning platforms have yet to yield results for most companies. The last mile for AI project success is the deployment and management of models in production requiring new technology and practices. This new area is called Machine Learning Operations or MLOps.

Focus areas:

Smartphone

- > Development of Smartphone application for end-user
- > Native application for consumers
- > Automation of application test (iOS/Android)
- > Build and Configuration Management
- > Embedded application development using Android
- > Knowledge and experience in kernel layer in Android

WEB

- > Development of Enterprise Web application
- > Construct portal site
- > Construct application for internal operations
- > Web-based e-Learning system
- > Construct CMS (Content Management System)
- > E-commerce related application development
- > Construct SNS and community operation system
- > Web service API development

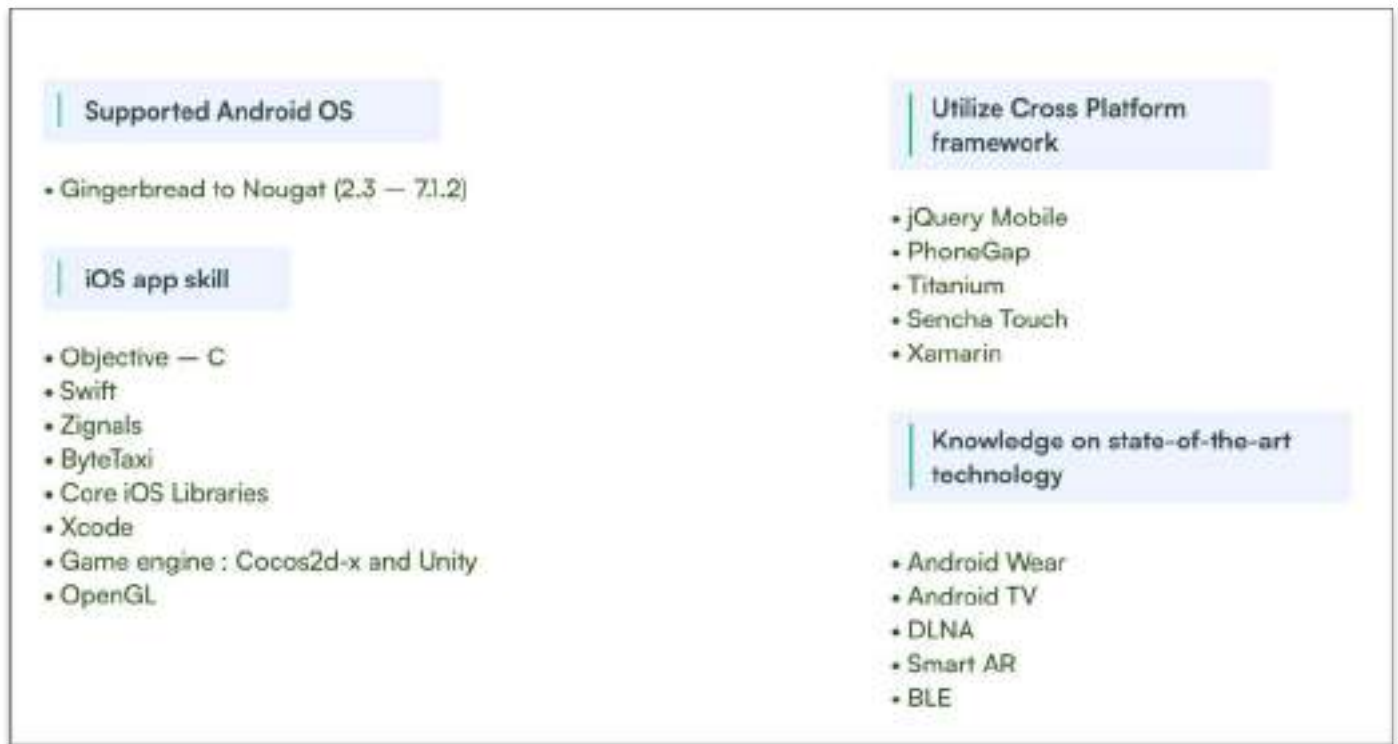

Windows

- > Windows application for consumers
- > Windows application for multiple regions

Technical Competencies

Examples of our Development

Collaborative Development with major internet collection agency

Development of recommendation AI using big data of past purchase

Collaborative Development with listed digital signage related company

Developed AI to optimize the ad display using the image data of pedestrians.

Collaborative development with listed Software related company

Developed internet filtering AI for children using access history

Team Strength

Expertise

Pipeline Labs engineers bring years of experience working with best-of-breed technologies like PostgreSQL, MongoDB, MySQL, Redis, MSSQL, and many more. That background, paired with development expertise across many different industries, from ecommerce to EdTech and fintech, makes our team a unique development asset.

Communication

It's a fact - data architecture is complicated. When businesses develop elegant solutions, they need a reliable team of engineers who can communicate clearly and efficiently to keep everyone on the same page and the project on track. Pipeline Labs knows good communication supports great work, and our team is committed to honesty and transparency.

Business intelligence

Data isn't worth much if you can't act on it. Augmenting your tech team with database gurus from Pipeline Labs allows your business to make smarter, more informed decisions. Business intelligence generated from deep data analysis can both highlight areas for improvement and reveal new opportunities for business growth.

Continued support

Outstaffing database services not only lets your core team focus on mission-critical areas, it also sets your website or application up for continued maintenance and support by developers who know your system best. Pipeline Labs offers companies the ability to quickly adapt their data architecture as their business evolves.

Cyber Security

Our dedicated Cyber Security Team provides consultancy, solutions, and services, including:

- Security Strategy and Planning
- Risk and vulnerability assessments

PIPELINE Security is the trading name of PIPELINE BANGLADESH. LTD.

House # 282/A, Road # 19/C New D.O.H.S. Mohakhali, Dhaka 1206
