What We Do.

Technologies We Use.

AWS, AZURE, GOOGLE CLOUD

We work with all major cloud services provider and are able to deploy any application globally at scale

Oracle, MySQL, Mongo DB

Our database architects can design and deploy scalable relational models and MySQL databases to enable elastic search for fast data access and processing

PHP, Laravel, Python, Django, Node.JS

Our developers enable server side processing and develop micro services using Python/Django or Node.JS. PHP, Laravel is our go to language for all computational heavy requirements. We are as well as expert in python.

iOS, Android, Flutter

Our mobile developers develop mobile applications for both iOS and android platforms.

React, JavaScript, JQuery,

Our front end and engineers use leading JavaScript frameworks such as React JS and JQuery to enable interactive UI for both browser and mobile based applications

HTML, CSS, Bootstrap, Vue.js

Our UIX designers ensure browser compatibility and usability of browser based application by using the right mix of HTML and CSS to create stunning UIs.
