CLUSTERING

- Create and manage highly available services
- Troubleshoot cluster issues
- Work with shared storage and configure multipathing
- Configure GFS2 file systems
- We can install and configure Pacemaker-based high availability cluster

EMAIL SECURITY

- We have decade long experience in working with mail servers
- We have created an email filter gateway that is constantly updated to protect you from spam, virus and fishing attacks
- This saves your company's internet bandwidth, storage space, end user's time and protects their data from being compromised

SMS GATEWAY

- Make your applications SMS enabled by utilizing our SMS Gateway API
- Send SMS directly from our website
- Long SMS Support
- Bangla SMS Support
- Delivery Report Export
- Send SMS from Excel File
- Developer API
- Customizable Sender ID

OUR SERVICES

RFID SERVICES & SOLUTIONS

Radio Frequency Identification (RFID) is an Automatic Data Capture technology that uses radio-frequency waves to read a moveable item to identify, categorize & track. It is widely used all over the world for product tracking, inventory accuracy, theft detection and prevention, fast checkout. It is fast, reliable and does not require physical line of sight or contact between reader and the RFID tag.
