

Who We Are

Software Global Consultancy, aka SGC, is a boutique software company offering Enterprise, Web, and Mobile based solutions to worldwide clients since 2007. We design our applications and services with a focus on aesthetics, usability, security, scalability, and reliability. Through our high-quality solutions and cutting-edge technologies, we serve our clients, giving them value for money and, thus, client satisfaction.

We incorporated our business as a private limited company in February 2009 (as SGCSOFT.NET PVT LTD) and later rebranded as Software Global Consultancy PVT LTD in 2016.

SGC has a complete team having

- Solution Architect (15+ years of experience)
- Project Managers (avg. 12+ years of experience)
- System Analyst (10+ years of experience)
- Full Stack Developers (avg. 4+ years of experience)
- UI/UX Designers (avg. 3+ years of experience)
- Software QA Engineers (avg. 6+ years of experience)

Some of our local clients include Dhaka Bank Limited, BUET, Dhaka University, Bangladesh Fire Service & Civil Defence, Pran-RFL, ACI, Ericsson, Robi, Airtel, Rahimafrooz, Nourish Poultry, Edotco, Bangladesh Army and 12 Cadet Colleges.

We also have more than 100 worldwide clients in Europe, Australia, and North America through partnership in the United Kingdom, France, and Australia.

Notable Experiences

Campus For Institutes	An online EduTech solution for US based institutes that integrated with ERP solutions to provide online storefront and hosted enrollment services.
E-Lending and Workflow Services	Web-based approval system for multiple financial products (e.g., Corporate Loan, Bank Guarantees, Card Services etc.) for Dhaka Bank Limited.
Call My Clinic	This is a telemedicine service portal for Bangladeshi Physicians. It is a platform for physicians to provide remote consultation and have a private clinic like facilities.
Fire Service Training Management System	This is a web-based training management system for Bangladesh Fire Service & Civil Defence. Site users can apply for training courses by paying fees online. The site also features course management, examination management, and certificate generation.
Ambulance Service Mobile Application	This is an emergency ambulance service Android application where users can find the nearest ambulances and requests for ambulances.
the2hourjob.com	This is a freelancing platform for female professionals who are not in active service and could utilize some hours from home. This platform has bidding facilities, online payment collection,

	live chat between buyer and seller, and delivery management system.
Ericsson IoT POC	This is an IoT proof of concept project where we built sensors (that can monitor temperature humidity, air pollution) in server rooms. These devices send data to the Ericsson IoT management platform over the GSM/GPRS network. We also developed an Android application that fetches data from the Ericsson IoT management platform and alerts server administrators.
mWater app and Survey portal customization	We helped DevCon Limited to customize mWater surveyor application and data portal for their water.org project in collaboration with Sajida Foundation and WAVE. We also provided the necessary training to the enumerators for data collection using the surveyor application.
Integrated Library Management System	We installed, configure, and deployed an integrated Library Management System for the Institute of Modern Language of Dhaka University. We also provided the necessary training for system administration and librarians.
Content Management System	We developed a bespoke Content Management System, Teachers Directory with Profile details, Project Management for the Department of Civil Engineering of BUET.
Field Force Job Tracker	This is an Android-based workforce and productivity tracker for Edotco engineers and technicians. This project also has timing

	management, workforce tracking using GIS and Google Maps, and web-based dashboards for management.
Ericsson KPI Dashboard	Ericsson Radio Access Network team analyzes GP network performance and generated different reports (scheduled and ad-hoc) for 2G, 3G, and 4G networks.
Ericsson EMA Dashboard	Web-based dashboard for performance measurement of Ericsson's EMA solution for Grameenphone and Banglalink.
vromon.com.bd	This is an online tour and hotel booking system with online payment collection (and EMI facilities), and hotel room reservation system, email automation, and analytics.
Mobile HRMS Solution for Robi	We developed a complete mobile based human resource management system for Robi in collaboration with ICE Technologies.
	The back-end admin panel interfaces with Robi SAP to collect employees' master data and clock in/out data.
	This app was available for internal users and supported Android, iOS, and Windows platforms.
	Some of the major features were clock in/out, leave management with approval, reimbursements, performance management with dialogues, venture idea generation with colleagues, carpooling.

Field Data Collection Tool for ACI	This is an online survey management system to create and share surveys with field teams. This project also has an Android application to fill up the survey with a precise GPS location. This project also features advanced survey editing capabilities, respondent's data visualization in tabular and map views, and export data to SPSS (.sav format) and Excel.
Business Process Automation for Nourish Poultry	As part of full automation, we helped Nourish Poultry and Nourish Foods to develop multiple websites, Android apps, and online tools. We developed mobile apps for data collection from remote R&D facilities that support both online and offline data transfer. We also developed online tools for the vehicle management system, retail store order management, point of sales, business analytics, and some more.
Data Portal for ACI Agribusiness	This is a secure web panel for uploading and managing contents, documents of different types, different market data. There is multilevel user management for sharing content with designated users only.
Online Admission System for Cadet Colleges	This is an online admission system developed for the Cadet Colleges Section of the Bangladesh Army. This admission system has been running successfully since 2012. It features online application with payments, examination management, exam scripts processing with OMR and QR-Codes, tabulation, and result processing.
Academic Institute Management System	We developed an educational institute management system for 12 cadet colleges of Bangladesh with prominent features like

	student management, HR management, result processing, tuition fees collection, and guardian portal.
Rollout Manager for Airtel Bangladesh	This is a full workflow management system with multiple internal and external stakeholders for rollout operations.
Sales and Operational planning solution for Rahimafrooz	This is a BI (Business Intelligence) system with data ETL (extract-transform-load) modules to harvest data from different systems such as the DB2 database, proprietary ERP solution and more.
Jagonews24 Mobile Applications	We developed Android, Windows, and iOS applications for Jagonews24.com, which is a concern Pran-RFL Group.
