

Company profile

You don't build a business, you build people, then people will build the

We start all projects by clients to understand all requirements, then build a containing all information about the proposed solution and detailed of the project approach. From here we move on to the design and build of the solution.

working closely, with our aspects of their detail project plan

We are an offshore software development agency that provides cutting edge engineering solutions.

Helping Fortune 500 companies and enterprise clients untangle complex issues that always emerge during their digital evolution journey.

Since 2018 we have been a visionary and a reliable software engineering partner for world-class brands.

Our key market advantage is the ability to leverage a wealth of experience in this sector, a network of local and international partners, and a very competitive pricing strategy to deliver quality software solutions

We are very very inspired by the campaign “Digital Bangladesh” introduced by People’s republic of Bangladesh.

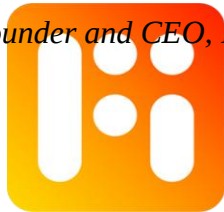

The term “agency” means proprietary Software Development Industry rather than a private limited company.

But our goal is to set up a private limited company in near future and then make it a public limited company here in Bangladesh.

1. **Company name:** Aspira women's health (AWH)
website: <https://aspirawh.com/>

Transforming Women's Health: Dedicated to improving the lives of women, starting with Ovarian Cancer.

2. **Mir Scientific:** Transforming Cancer Management
website: <https://www.mirscientific.com/>

miR Scientific, LLC is a healthcare company committed to transforming global cancer management by providing early and highly accurate detection, characterization, and monitoring of disease. The Company has developed the miR Disease Management Platform®, a proprietary, non-invasive platform for the effective management of targeted diseases, initially focused on urological cancers. The platform is powered by the miR Sentinel® Prostate Cancer Test, a liquid biopsy urine test that can accurately detect, classify, and monitor prostate cancer based on the interrogation of small-non-coding RNAs extracted from urinary exosomes.

Place: House#23, 2nd floor, Road 121, Gulshan-1, Dhaka-1212.
