

Company Profile

Algorithm Generation Ltd was found on 2015 to give the Business Process Automation arena of Bangladesh a fresh new look. We 1st started with the process of ERP, enterprise resource planning from July 2015. But soon we discovered that we have the ability to provide our countries business houses an actual flavor of world slandered technology services that it is lacking for a long time from its own resources.

Our theme of work slowly engaged few other companies to partner up with us, not in great numbers, who are also working or at the time looking to start with the same theme both in Bangladesh and Abroad.

Our focus is to come up with products that helps users to acquire additional quality time, which is a rare commodity in our country, by providing them with accurate solutions which can automate their daily repeatable works. Which can also give them an assurance that even if they are not present to deliver or do something physically, they also be able to do the same virtually.

Algorithm Generation Ltd also has a passion to assist upcoming talents in technology arena of our country. To put a practical implementation of that process, Algorithm Generation Ltd has started Partner Product program. Which helps upcoming talents of Bangladesh to achieve their dreams under experienced and proper guidance, not just waste their talent and time to find a way of making their dreams come true. We have been there, leaned the very hard of ways, so we like to save them from those.

Current Products

Information Technology Consultation We provide specialized IT consultation to clients based on their current & future growth. Under the consultation contract we do not supply any products that we recommend to prevent possible biasness. We are not affiliated to any 3rd party products or services, as we are not under any contract - this disengages us from any kind of targeted sales to push products to clients. This unique advantage gives us the opportunity to provide clients with the actual technical business solution for long term growth.

Partner Product this is not a unique approach considering the world of Information Technology throughout the entire world, we partner ourselves with product concept builders who do not have the technical skills or business knowledge to develop that particular product on their own.

Considering the creativity & innovation requirement and the business opportunity we take over a certain percentage of the organized company and take ownership in building the product for the concept builder. We also at the

same time initiate business administration as we are experienced in that field considering the new concept builders.

Products under Construction

Simple Office Tool	Simple Office Tool in an Enterprise Resource Planning (ERP) for Small Trading Organizations to Multinational Enterprise of All Business Types. Simple Office Tool is purely focused on Bangladesh Business Phycology. Based on the governance of Bangladesh it is entirely adjustable according the condition changes which will or may come in the future. Having claimed the above, Simple Office Tool is not limited to Bangladesh market. Our ERP is being built to adopt any business phycology of any country. Personal & Business or Corporate process automation systems will not be the same after Simple Office Tool puts its 1st steps in the market.
IoT Base Engine	We have designed and started building an IoT base engine. Internet of Things, is the next big trend and we want to ride that trend as much as we can. In order to do so we have completed a full design on parking all IoT based devices under one umbrella. From which one will be able to control and monitor all IoT devices under his/her umbrella.
IoT Based Independent Automated Security Device	We have also completed a security device design which will address all your physical security related issues. No more thinking of what is going on when you have left your office or home or anything related to that manner. Our device is designed to address any anomalies, based on your settings, which it will come across and send you live feedback then and there. We are building our prototype now.
Artificial Intelligence	This is one of the bold step of ours. We have completed the 1st stage of Artificial Intelligence and now are completing the 2nd stage of this Dream Goal of any Technology Based Dives. Our Dream is to build this AI to the future where IT will be able to help anyone as per instructions.
