Software's powerful features for manufacturing company

Costing Article/Style: The costing module is designed to accurately calculate materials costs for local/sourced/imported products revised option will help you to get pricing approval.

Tech Pack Analysis: Software AI will sort out the required information about the garments order such as reference sample, measurement chart, print instruction, embroidery instruction, wash instruction, etc.

Sample Design & Development: Software-generated sampling roadmap will boost manufacturer performance by giving materials advice based on tech pack analysis. Sample-wise approval or resubmission can be done through software.

Critical Patch: The critical path module is used to keep track of outstanding activities that need to be performed for each style. Every day users are notified of the tasks that they need to perform in order to meet the required style completion date.

BOM Bill of Materials: The module allows users to select a pre-developed specification. The Software will automatically generate the BOM based on the sample development records and the market price of the product for sourcing, budgeting, and manufacturing of the Garments.

Material Purchase: Approved quality-wise product buying within the required date is becoming very difficult, this complex purchasing process can be completed very easily through this module.

Inventory Materials: The material inventory module manages your fabric, trims & accessories based on Bar-code or QR code scanning, making stock retrieval quick and efficient. Surplus materials can be flagged to behold or used in future orders, software will encourage stock reduction.

Production Plan: It has been designed for managing & planning garment manufacturing by scheduling styles based on factory lines & calculating the production time required based on the number of operators as well as line efficiency shown by the graphic.

QA & Allocation Material: Smart feature will check suppliers' products according to the buyer's quality standards and allocate them to the floor. AI allocation plays a key role in reducing wastage on the production floor.

Scan & Pack for shipment: SCAN PACK will ensure you are delivering the right product, in the correct amount, to the right address. Significantly reduce manual errors or typing by easily linking barcodes and QR codes to any of your items.

Commercial & Accounting Integration: You are using the best accounting system for your business & we don't want to change that. We will export the data from our module to fit your accounting software.

Software's Facilities

An integrated solution that covers the entire process of manufacturing!

Module-wise sampling, confirming the order, production, commercial, import/export, store Inventory & shipment day-to-day processes and functions.

Collect data from actual business process execution from price quotation to actual shipment and export proceeds realization.

Set up automatic email and popup notifications to help you keep track of stock levels, returns, and more.

Maintain materials submission and approval process repeatedly.

Smart T & A will keep you on track-return back even when the track changes.

Software generated working roadmaps to sketch out the shipment plan with the buyer and ensure your team stays on the same roadmaps.

BOM will be generated by the merchandiser based on the purchase order (PO) and the market price of the product.

QR & Barcoded Work Order will help you to reduce banking costs and boost your supply chain performance.

Raw materials movement, work in process & storage of finished goods track by QR & Barcode.

Effortlessly check in/out items (move item) to employees, and customers in seconds using the smartphone or scanner. Supply chain activities report always knowing what's been in or out, when and by whom.

Significantly reduce manual errors or typing by easily linking barcodes and QR codes to any of your items.

The smart feature saves your time, will make next time easier, ensures you don't lose your working list, and we add features and enhancements all the time.

Keep your team connected, and decide who can do and see what. Grant access to multiple users and manage their permission levels. The software provides a complete view of business information with real-time data.

Stay updated anytime, anywhere. Generate custom CSV and PDF reports based on the current status or past activity.

Why you should choose Apparel Online's software & Service

Tailor-Made Software

Standard features can be modified to a client's specific needs or requirements. Each factory is managed to maintain its motility, you won't have to worry about useless features just cope and add as per your necessity.

Innovative Team

The apparel Online team is always on the search for better, faster, and less expensive software development methods. In short, we create new ideas to automate the entire operation of garment/footwear manufacturing. Reliable documentation provides an easier understanding of software at the beginning and a reference for later access. Documentation will definitely save time and money in the long run. It helps you track activities related to the ERP Software and increases the quality of operations to ease the usage of ERP Software.

Data Analysts

The software will reduce your work beyond performing data entry. Initial data accuracy is very important as this data will be used by all departments. Clustered data will help managers make decisions in any crisis.

Standardize Price

What we want to do is deliver real-quality apparel & footwear manufacturing software at an affordable price. The software can be started by paying a fraction of the actual price.

SUPPORT

Apparel Sync provides strong support through a combination of developers, testers, and quality assurance teams. We resolve the problem, what we get through message or ticketing within 24, 48 maximum of 72 hours.
