A Brief Intro

Who We Are?

We are a software development, IT consulting services & SI company based in Dhaka, Bangladesh.

What We Do?

We streamline how our client partners build and launch their big ideas and successful products.

How We Help?

We help in envision, designing, testing, and developing tailor-made software solutions, products, services and IT systems.

About Us

Valiant Technologies is an IT engineering and technology services firm, specializing in scalable, and heavy-tech solutions. Our expertise expands in three major business verticals, which consist of being an EPC Contractor, Engineering Solution Provider, Enterprise IT System Integrator (SI), and an Integrated Marketing Communication agency with decade-long industry experience in relevant fields.

In recent years, the company has worked with some major government, defense & private agencies having 100+ satisfied clients in its portfolio. Today, Valiant proudly serves several local business conglomerates including franchisee cricket teams, world-renowned hospitality brands, large construction contractors, real estate investors, etc.

- Unified Communications, Security & VMS

Clientele

We have worked on both technical and creative projects on difference instances as a project owner as well as subcontractor for almost a decade.

Here are the names of some of the brands/organizations worth mentioning:

Why Choose us?

1

Dedicated to Success

We help our clients remain ahead of the curve by driving innovation. We are concerned with our client's immediate and long-term objectives. We think that success has three dimensions: it benefits our clients, their consumers, and the communities in which they have an impact.

2

Innovative Approach

We are a network of innovators. We devise bold solutions to the most complex client challenges. We can explore new technologies to provide best-fit solutions.

3

Quality Delivered on Time

We have a great set of internal frameworks and best-in-class infrastructure that allows us to produce high-quality solutions consistently. We ensure that every delivery is on schedule.

4

Affiliation & Experience

Currently, we are partners some of the world's leading technology OEM. Also we have over 100 local and international organizations under our hood that have fully outsourced their IT departments to us for long-term growth and profit.

Product Engineering

(Our Service Expertise)

You need the right tools for the job, and we build them specifically for you.

THE CHALLENGE

Tech stack, matching consumer demands, and limited infrastructure/resources.

The majority of software projects are conceptual, with the goal of designing and building software products that suit a variety of consumer needs. Even the simplest application or product requires developers to grasp the underlying business concept and incorporate the necessary features to meet growing client requests.

Another issue that most software development organizations confront is a lack of resources or IT infrastructure to successfully execute projects. This could be due to a lack of high-performance software development tools, powerful computing platforms, inefficient data storage designs, or ineffective networking and communication. These roadblocks reduce software development teams' productivity and performance, affecting the total outcome.

THE SOLUTION

Minimize friction and achieve better overall outcomes

We pay attention to the specific characteristics of your company. We create strategic solutions to assist your workflows in a timely and effective manner. There's no need to tamper.

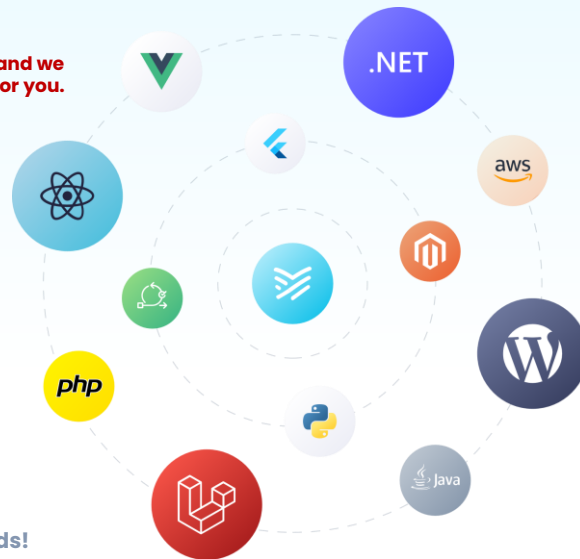

Our development teams have a clear understanding of the challenges that lay ahead of them and a strategy to tackle them dynamically that is driven by evolving technology trends

THE RESULT

Say Goodbye to Your Workarounds!

You don't have to settle with commercial software that doesn't fit your working style. You can get rid of roadblocks with a solution that is created specifically for you.

The result: An effortless product development experience and a great product. 😊

Resource Planning

(Our Service Expertise)

Bringing to you the best resource planning and management software to run your business with millions of happy users worldwide

THE CHALLENGE Integrations are painful

If you have individual software solutions that work but don't communicate with one another, you're probably entering data more than once and missing out on a comprehensive picture of what's going on.

Also, integration between your CRM, e-Commerce Accounting, Inventory, PoS, Project Management, Manufacturing Resource Planning is tiresome. This is where the all-in-one business management software Odoo comes into play.

THE SOLUTION Everything you need + a top-notch user experience.

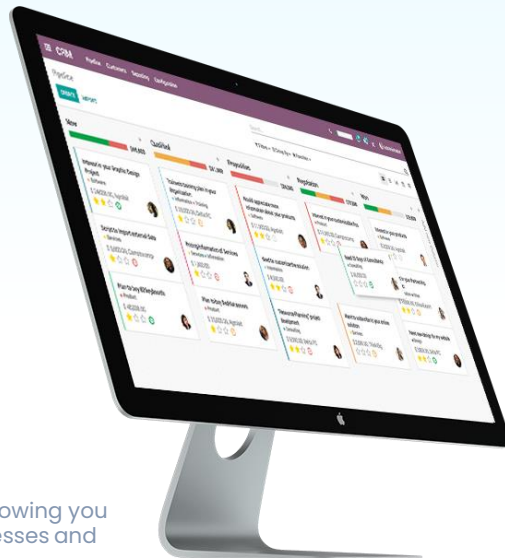

Our ERP software combines ease of use with extensive functionality to provide effective business management. The platform includes a plethora of useful tools for managing all of the company's business processes, including production, sales, warehouse management, logistics, accounting, reporting, and more.

There is something to help address all of your business needs in a single, cost-effective, and modular solution, thanks to the installable apps, modules and APIs: no more work to get different technology cooperating.

THE RESULT Seamlessly Integrated System

A seamlessly integrated solution that communicates across all systems, allowing you to fully automate your business processes and reap the benefits and savings.

The result: A top-notch usability that scales among all apps 😊

CIO-As-A-Service

(Our Service Expertise)

THE CHALLENGE

Who is in charge of your IT?

Information technology strategy and execution are crucial for most businesses to enable growth, increase profitability, and reduce risk. Even enterprises with their own chief information officers (CIOs) require strategic guidance to keep their businesses in sync with their technology today.

Not only that. The contribution of the IT department to the company's income creation must be quantifiable as well. IT departments must improve their credibility and responsiveness in order to assist the business in its transitions. New enabling technologies, such as machine-to-machine integration, mobile, and cloud technologies, as well as changes in user expectations (e.g. "usability," "digital native," "bring your own device"), necessitate IT transformation on a regular basis.

HOW DO YOU KNOW YOU NEED THIS?

Some of these issues may be familiar to you

- A comprehensive IT assessment is required or desirable.
- An urgent situation requires quick leadership intervention.
- A strong technological leader is required, but a full-time employee is neither accessible nor cost-effective.
- The value of IT investment is unclear to management.
- The IT department can benefit from professional training and growth.
- To assist with plan execution, a skilled sounding board is required.
- A gap in the IT senior ranks has arisen unexpectedly.

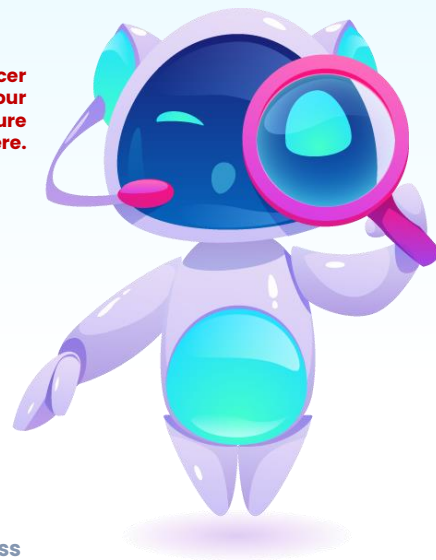

For the first time ever, introducing Chief Information Officer as a service for early stage startups and SMBs. Hire your virtual CIO and stay worry-free using our IT infrastructure and resources, thus face your challenges elsewhere.

THE RESULT

Brings Great Value and Drive Success

- **Business Benefits:** Projects provide the desired return on investment or solve key problems
- **Project Execution:** Projects are on-time on budget and meet expectations
- **Security:** Appropriate risk mitigation strategies are in place
- **Stability and Reliability:** The is available and reliable
- **Cost:** IT investment is appropriate and well-managed
- **Intangibles:** Better understanding of future strategic value to be gained from IT investment

The result: Committed to working with you to deliver better, together. 😊
