

Generating **growth**
through *innovation....*

Effective Solutions For Business Success

Intuisys Ltd is a software development and outsourcing firm based in Dhaka Bangladesh providing a range of enterprise software development services and products that include client-server and n-tier architecture applications, Windows development, cross-platform development, mobile applications, internet application development and database solutions. We are most strong in .NET and JAVA development across multiple platforms.

Our customers based both locally and overseas operate in a range of industries including, financial services, telecommunications, supply chain distribution and manufacturing.

Intuisys is a vibrant company, full of exciting ideas, creativity and innovation. Our experience, skills and low cost advantage bring noticeable improvements in business efficiency that you can rely on. Our goal is "Generating growth through Innovation". With this aim in mind, we respond proactively to our customer's ever changing business needs, providing flexible systems-based solutions.

We are a proven team of highly talented and dedicated finance and IT professionals from different backgrounds that specialize in innovative, tailor made end-to-end solutions, backed with outstanding results.

Over the years, we have developed a reputation for being a company that you can rely on to provide robust, high quality software products that you can depend on.

The support and help we provide our clients is first class and has enabled them to get to where they are today. This is backed by a friendly, eager to help support team, solving problems quickly and efficiently.

Why Intuisys

Rapid development

We have the advantage of having our own advanced software development framework Mystra® - designed specifically for rapid software development, thereby reducing the time and cost of any development. This allows us to provide high quality, cost effective solutions at affordable prices.

Versatile & Robust solutions

Our solutions are built on a solid state of the art platform, which ensures the reliability of all the software we produce. The use of our Mystra® guarantees that our software are robust, secure, manageable and scalable to any future changes.

Extraordinary user experience

Our use of the very latest software development technologies such as .NET Core allows us to provide our customers with a unique user experience, through the use of our compelling graphical user interfaces.

Deadline oriented

We work within the strict deadlines and always strive to exceed customer expectations by leveraging efficient project management and post delivery technical support.

Research and development

We have a strong R&D team working on futuristic technologies for innovative solutions for our clients.

Our Services

Offshore Software Development

The purpose of our offshore development centre (ODC) is to allow our clients outsource their software development to us, while they focus on their core value competencies, taking advantage of our technological expertise, and dramatically reducing their development costs.

Consultancy and Advisory

Our Consulting Services span both business operations and technology services requirements. Our goal is to help our clients achieve improvement in business processes and to design & build application software that generates high return on investment. We aim to create breakthrough business process.

Software Prototyping

Our team can help you create detailed requirements specifications for your future software from scratch or examine your documentation to ascertain whether it matches your business requirements or not, provide design concept and finally deliver upscale GUI for your application during the final stage to give you a complete look & feel of your future software or solution.

System Integration

The service consists of developing custom solutions in accordance with client's specific requirements, which can where required be integrated with third party financials and CRM systems like Exchequer, SAP, Sage, Microsoft Dynamics etc to enhance a particular line of business.

Data Migration

Migration is a cost-effective alternative to rewriting or buying new existing products. At Intuisys, we provide end-to-end solutions for seamless migration - from planning, installing, and verifying, to customizing, testing, data migration and support.

Our Products

Our products are built on our framework Mystra® that follows a complete Object-Oriented multi-tiered Model Driven Architecture (MDA), making our products easily maintainable and deployable in any database and network environment
