ABOUT NexERP

At NexERP we are aware that creating client-oriented software takes a mixture of technical excellence and clear communication and we ensure you to receive both.

We have over 18 (Eighteen) years of system development expertise in various business model. We know that every client is unique and we strive to deliver an individualized, innovative and affordable ERP system for each client.

Our professionals provide Enterprise Resource Planning Software (ERP), business and system strategy, network and systems integration, systems design and architecture, applications implementation, and related services that enable clients to leverage technology for stronger return on investment, increase in operational efficiency and improved customer service resulting in sustainable competitive advantage.

ABOUT NexERP

NexERP has developed an integrated system for client. The System maintains all kinds of day-to-day business operation for operational efficiency.

We have a clear business & system strategy to manage ERP Integrated School Management Software, Human Resources Management Software (HRMS), Payroll Management, Point Of Sales (POS) , Inventory Management, Budget Control And Procurement Management , Library Management, Training And Tracking Management, Fixed Assets Management, etc. through centralized management, professional execution in operation and market-driven philosophy. To better align IT strategy with its business strategy, we do conduct Business & Systems Assessment consultancy to customize functional requirements with strong emphasis and recommendation on application architecture and data placement strategy.

OUR MISSION

- ❖ Committed to delivering innovative services with cutting-edge technology in both the local and international markets.
- ❖ We aim to facilitate business objectives while ensuring operational efficiency by providing best-in class consulting, Information Technology solutions, BPO services and sharing our industry knowledge and expertise to turn goals into ultimate values for our employees, clients, partners and shareholders.
- ❖ Our dedicated team values - innovation, integrity, excellence and respect for individual learning, sharing and growing.

OUR VISION

Being a Bangladeshi company our vision is to be:

- ❖ A leading provider for Enterprise Resource Management Software, Business Process Outsourcing (BPO), IT solutions and Business Consulting services.
- ❖ Gaining international recognition.
- ❖ Delivering high quality services.
- ❖ Forming long-term partnerships with our clients.
- ❖ Building a dynamic and growing business which will create a vibrant environment for our people.

OUR PRODUCT AND BENEFIT

- ❖ More robust, secure & stable system engine.
- ❖ More improved & visually appealing user interface.
- ❖ Robust error handling at the entry level to ensure clean & error-free data entry.
- ❖ Error free data ensures accurate reporting across the system.
- ❖ Rollback facility in almost all sorts of confirmation & processing to avoid garbage data.
- ❖ Inventory related operations are performed with almost zero level error.
- ❖ Reporting made easy with integrated Jasper Reports engine (optional).
- ❖ AJAX integrated components to generate dynamic content & filtered data.
- ❖ No external or third-party JavaScript library dependency.
- ❖ Improved security to prevent unauthorized access in relevant user interfaces.
- ❖ Email notification feature during confirmation or other sorts of processing.
- ❖ Machine/Hardware based licensing (no need to load any special interface/card).
- ❖ System can be operated as a plugin to popular APACHE server as the front-end to minimize attacks from external world.
- ❖ Automated internal batch based costing to ensure more accurate Material COGS.
- ❖ Multi-Homed database connectivity to reduce data load on single server.
- ❖ File/document uploading system directly from end-user pc.
- ❖ Direct integration with various types of Hardware Devices for data acquisition & tasks automation.

DATA BACKUP SYSTEMS

Enterprise Resource Management (ERM) System

Why Do We Need This?

- ❑ Enterprise Resource Management software is an integral component in ensuring the success of the various businesses. It is a primary tool not only to manage growth but to ensure operational efficiency and transparency.

What is ERM?

Enterprise Resource Management (ERM) System is a powerful, secured and fully-integrated database driven software solution helping any organization or group of organizations to manage and maintain all kinds of day-to-day information.

All these activities are combined into different modules which inter-network to each other with various features and one-point to multi-point activities. ERM can be accessible from any channel like LAN, Intranet, Internet etc. through any web-browser.

ERM is Powerful & Integrated

- Unlimited and Seamless user access from any location through LAN, WAN & NET.
- Central Data Warehousing for secure & reliable data processing. No data @ Client End.
- Ready to deal with any number of records. Limitless Data Banking.
- Multiple Business Accounts can be maintained under one system with complete data protection. Separate Data segment for individual Business.
- Real-time Information with Live Reporting System.
- Entire System is clustered into different modules based on various scopes of works by mapping different activities related to Business Management.
- All modules are fully integrated to each other following one-to-many and many-to-one relationships.

ERM is Flexible & Scalable

- ERM has been designed and developed by analyzing the work-flows and real-time integration of business processes practicing by all companies to manage their diversified businesses.
- Its data diagram follows generic business logics. These logics are fully integrated to each other through dynamic mapping of different business rules and activities.
- It offers flexible and scalable business rules which can be easily configured at different levels for any business.
